

General Product Guide 2012

For Refrigeration, Air Conditioning and Heat Pumps

Copeland®
brand products

Alco Controls

DWM COPELAND

Copeland®
EazyCool™

Note:

The components listed in this catalogue are not released for use with caustic, poisonous or flammable substances. Emerson Climate Technologies cannot be held responsible for any damage caused by using these substances.

General Information

Technical data are correct at time of printing. Updates may occur and should you need confirmation of a specific value please contact Emerson Climate Technologies stating clearly the information required.

Emerson Climate Technologies cannot be held responsible for errors in capacities, dimensions etc., stated herein. Products, specifications and data in this literature are subject to change without notice.

The information given herein is based on data and tests which Emerson Climate Technologies believes to be reliable and which are in accordance with today's technical knowledge. It is intended for use by persons having the appropriate technical knowledge and skill, at their own discretion and risk. Our products are designed and adapted for fixed locations. For mobile applications failures may occur. The suitability for this has to be assured from the plant manufacturer which may include making appropriate tests.

Scroll Compressors

- Comfort

• ZR Scroll Compressor Range in R407C and R134a	10
• ZP Scroll Compressor Range in R410A	14
• ZPD & ZRD Digital Scroll™ Compressor Range	18
• ZH Scroll Compressor Range	22
• ZRH/ZBH Scroll Horizontal Compressor	26

- Refrigeration

• ZB Scroll Compressor Range for Medium Temperature Refrigeration	30
• ZF Scroll Compressor Range for Low Temperature Refrigeration	34
• ZFD & ZBD Digital Scroll™ Compressor Range for Low and Medium Temperature Refrigeration	38
• ZO & ZOD Scroll Compressor Ranges for CO ₂ -Subcritical Refrigeration	42
• Sound Shell for Copeland Scroll™ Compressors	44
• S-Series & Scroll Booster Compressors	46

Semi-Hermetic Compressors

- Stream Series with CoreSense™ Diagnostics	48
• For HFCs Refrigerants	50
• For R744-Transcritical Applications	54
• For Continuous Capacity Modulation	56
- Discus® Reciprocating Compressor Range	58
- S-Series Reciprocating Compressor Range	64
- DK & DL Reciprocating Compressor Range	70

Condensing Units

- Copeland EazyCool™ Outdoor Condensing Units with Scroll Compressors	75
- Copeland EazyCool™ Outdoor Condensing Units for Refrigeration Network	82
- Copeland EazyCool™ ZX Outdoor Condensing Units	86
- Copeland Scroll™ Indoor Condensing Units	88
- Digital Receiver Units HLR	92
- Semi-Hermetic Condensing Units DK/DL	94
- Standard Semi-Hermetic Condensing Units	98
- Condensing Units with Semi-Hermetic Discus® compressors	102

Compressor Motor Codes Table

106

Controls

- Electrical Control Valves	112
- Electronic Controllers and Sensors	137
- Thermo® Expansion Valves	164
- Solenoid Valves	193
- Mechanical Pressure Regulators	200
- Pressure Controls and Thermostats	206
- System Protectors and Moisture Indicators	221
- Oil Management Components	238
- Suction Accumulators, Ball Valves, Acid Test Kit	243
- Accessories, Spare Parts & Appendix	248

Pioneering Technologies For Best-In-Class Products

Emerson Climate Technologies is the world's leading provider of heating, ventilation, air conditioning and refrigeration solutions for residential, industrial and commercial applications, supporting the industry with advanced technology, technical support and training services.

For more than 80 years we have been introducing innovative technology to the market, from the first semi-hermetic and hermetic compressors in the 1940s and 1950s, plus the high efficiency Discus, air conditioning and heating scroll compressors in the 1980s and 1990s, to the new Stream semi-hermetic and the digital scroll compressor of today and the variable speed scroll with drive technology of tomorrow.

Based on this we have developed an unequalled range of solutions for the refrigeration and air conditioning markets. In recent years, we have become a major solutions provider to the heat pump industry. Our range of Copeland® brand products and Alco® Controls addresses the very diverse needs of all of these markets. With scrolls and semi-hermetic compressors available for all main refrigerants, equipped with smart electronics and capable of Digital and Variable Speed Modulation, Emerson Climate Technologies has taken compression technology to new heights.

1.300 employees develop and deliver Emerson's high class technology and manufacture our products in four European plants: Belgium, Northern Ireland and the Czech Republic (2 plants). R&D centres in Welkenraedt (Belgium), Mikulov (Czech Republic) and Waiblingen (Germany) enable new developments not only to meet our customers' requirements but also to redefine the limits of technology.

With sales points in Germany, France, Spain, Italy, the United Kingdom, Scandinavia, Benelux, Poland as well as in Eastern Europe and Russia, Emerson Climate Technologies supports its European customers in a lean and efficient manner.

Our new 2012 product catalogue gives a comprehensive overview of Copeland® brand and Alco® Controls products. Have a look and discover more about our broad and innovative product ranges:

- new compressor line-up applicable for multi refrigerants and CO₂ such as the new semi-hermetic Stream line-up,
- improved Summit Scroll line-up for comfort and refrigeration applications extended with low-temperature and digital models,
- indoor and outdoor condensing unit line-up for refrigeration applications tailored to the different application requirements of our customers.
- finally our scroll compressors for heat pumps with R410A with and without the enhanced vapor injection technology complete the program and underline our innovation strength.

More in-depth technical data is available through our user-friendly Copeland® selection software tool and Alco® Controls selection tool accessible via our web pages **www.emersonclimate.eu**

For individual consultancy and service please contact your European sales office.

Copeland Scroll™ Compressors

With the launch of scroll technology in the mid 1980s Emerson revolutionized the market setting new standards in the air conditioning industry. Since then Copeland Scroll™ has become the reference not only in air conditioning but in refrigeration and heating applications too. Thousands of customers trust our proprietary technology: today, 80 million Copeland Scrolls™ are installed worldwide, more than any other scroll compressor brand. Copeland Scroll™ compressors range from 1.5 to 40 hp and are designed to work with all the main refrigerants, including CO₂. With compressors built in both vertical and horizontal versions, and capable of digital modulation, Emerson Climate Technologies has expanded the capability of scroll technology to new heights.

Additional innovations such as enhanced vapor injection, the new variable speed scroll with drive technology for heat pump compressors or the design of the Emerson sound shell give manufacturers, installers and end users the right tools to reduce the carbon footprint of their installations, optimize system design, efficiency, sound and reliability while ensuring long equipment life time and minimizing capital and operating costs.

Applications for scroll compressors continue to grow thanks to innovation and adaptation. Industry as a whole has embraced its responsibility to put the environment first in its list of priorities, and this has led to strategic imperatives such as the need to introduce larger capacity scrolls with improved seasonal performance, modulated systems and product designed for use with 'green' refrigerants such as CO₂. Emerson is staying abreast of these challenges by successfully developing its technologies further in each of these areas.

Today we offer the broadest scroll product line-up in the market

Comfort Applications

For decades, Emerson Climate Technologies has driven advancement in the air conditioning and heat pump industry, leading the field with engineering products and systems that maximize the comfort of office and living spaces – while minimizing costs and inefficiencies.

Copeland Scroll™ compressors are designed to deliver the highest performance in residential and commercial applications.

Thanks to the widest selection of air conditioning and heating optimized scroll compressors with a range from 1.5 up to 40 hp and the option to combine single compressors in even and uneven tandem and trio versions increasing overall capacity up to 120 hp with four circuits it has never been easier to match all desired applications with the highest efficiency and reliability. Whether your need is a cooling optimized, heating optimized or reversible unit you will find the most advanced technology within our range.

One of the most important innovations in scrolls for comfort application, driven by the need for higher levels of efficiency and comfort, has been the introduction in 1993, of Copeland Digital Scroll™ for capacity modulation and its subsequent launch in 2001 for use in VRF applications. Today, our Digital Scroll™ technology is used in diverse applications such as chillers, rooftops and air-handling systems as well as in smaller systems for residential or light commercial use.

A further innovation has been the introduction of ZH compressors with enhanced vapor injection technology. This technology, when applied in space heating and tap water production, permits to replace traditional boilers without changing the radiators. Additional benefits are the reduction of the discharge temperature and the extension of the operating envelope for the production of high temperature water. ZH compressors are available for R407C and now also for R410A - the latter option allowing OEMs to design more efficient and compact equipment.

In 2012, Emerson will add the ZHW R410A Copeland Variable Speed Scroll with drive technology to its heating portfolio. This new solution for heat pump applications will feature a brushless permanent magnet motor and enhanced vapor injection technology matched with a highly efficient drive. The key benefits of this new technology include high seasonal efficiency enabled by the use of enhanced vapor injection, high water temperature for all applications (condensing at 68°C), with the highest efficiency throughout the operating envelope.

ZR Copeland Scroll™ Compressor Range in R407C and R134a

ZR Copeland Scroll™ compressors, in R407C and R134a, for comfort and process/precision cooling applications.

Applied in the air conditioning and comfort industry for water chillers, rooftops and close control unit applications, scroll compressors are now the most used compression technology replacing reciprocating and screw compressors due to its undeniable superiority. Several, fully Copeland® qualified, multiple compressor assemblies (tandem and trio) are available to allow the use of Copeland Scroll™ compressors into large capacity systems (ex. up to 500kW air cooled chillers) able to deliver optimal comfort, low operating cost with higher seasonal efficiency (ESEER).

The range of products goes from the ZR18 (1.5Hp) to the ZR380 (30hp)

ZR Scroll Compressor

ZR Scroll Compressor Line-up

Conditions EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

Features and Benefits

- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Wide scroll line-up in R407C and R134a
- Low TEWI (Total Equivalent Warming Impact)
- Low sound and vibration level
- Low oil circulation rate
- Copeland® qualified tandem and trio configurations for superior seasonal efficiency (ESEER)

Maximum Allowable Pressure (PS)

- ZR18 to ZR81:
Low Side PS 20 bar(g) / High Side PS 29.5 bar(g)
- ZR94 to ZR380:
Low Side PS 20 bar(g) / High Side PS 32 bar(g)

Operating Envelope R407C

ZP Copeland Scroll™ Compressor Range in R410A

ZP Copeland Scroll™ compressors, in R410A, for comfort and process/precision cooling applications.

Emerson Climate Technologies has been the pioneer in launching the first complete line-up of commercial scroll compressors in R410A. Copeland Scroll™ technology combined with the advantages of the R410A refrigerant build the ideal conditions for system manufacturers (OEMs) to optimize costs and efficiency of their systems.

ZP Copeland Scroll™ compressors are perfectly suitable for air cooled chiller systems up to 600kW (720kW if water cooled) featuring high comfort and superior seasonal efficiency (ESEER). Whether used in stand-alone, tandem or trio configuration, the ZP Copeland Scroll™ broad line-up meets today's market requirements with unmatched flexibility, efficiency and proven reliability.

ZP Scroll Compressor

ZP Scroll Compressor Line-up

Conditions EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

Features and Benefits

- Copeland® qualified tandem and trio (now also uneven) configurations for superior seasonal efficiency (ESEER and SCOP)
- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Extended 5K operating envelope suitable for HP applications
- Low TEWI (Total Equivalent Warming Impact)
- Wide scroll line-up in R410A
- Low sound and vibration level
- Low oil circulation rate

Maximum Allowable Pressure (PS)

- ZP24 to ZP91:
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
- ZP90 to ZP485:
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

Operating Envelope R410A

ZPD & ZRD Digital Scroll™ Compressor Ranges

Stepless capacity modulation in air conditioning applications:
Flexible solution for R407C and R410A

In many cooling and heating systems the load and the operating conditions vary over a wide range thus requiring the use of capacity modulation. Digital Scroll™ is a simple compressor solution able to assure stepless modulation down to 10% of the nominal capacity, enabling precise temperature control, superior comfort and energy saving.

Digital Scroll™ compressors are the preferred choice for process cooling, refrigeration racks, condensing units, VRF, rooftop and air handling unit systems.

ZPD & ZRD Digital Scroll™ Compressor

ZPD & ZRD Digital Scroll™ Compressor Line-up R410A

ZPD & ZRD Digital Scroll™ Compressor Line-up R407C

Conditions EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

Features and Benefits

- Wide modulation range from 10% to 100% for immediate load adjustment, close temperature comfort, optimal comfort
- No complex electronics, a quasi-drop-in solution for fast time to market, no EMI/EMC problems, easy installation and maintenance
- No impact on system mechanical balance: no vibration and resonance phenomenon, no frame / piping redesign necessary

Maximum Allowable Pressure (PS)

- Digital ZRD42 to ZRD81:
Low Side PS 20bar(g) / High Side PS 29.5 bar(g)
- Digital ZRD94 to ZRD125:
Low Side PS 20bar(g) / High Side PS 32 bar(g)
- Digital ZPD34 to ZPD91:
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
- Digital ZPD103 to ZPD182:
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

Suction Superheat 10K / Subcooling 0K

ZH Copeland Scroll™ Compressor Range

The ZH compressor range has been optimized for heat pump application. In addition to the R407C range there is now a range optimized for R410A. Both ranges are based on 3 platform sizes and cover 4kW to 38kW.

The ZH heating compressor has been optimized for applications in new buildings where water temperature demand for space heating is 50°C. The Copeland Scroll™ heating compressor delivers higher capacity at low evaporating (heat source) temperatures thereby better responding to heating requirements than reciprocating compressors.

The Copeland Scroll™ heating compressor has a special scroll design, which attains high efficiency in heat pump operating conditions, especially when the heat source temperature is low. It also results in less supplementary heating to cover the full heating demand on the coldest days. As for all Copeland Scroll™ compressors, the run time has a positive impact on the efficiency of ZH heating compressors.

ZH heating compressors have been designed for low sound levels, a specific requirement for indoor heat pumps.

ZH Scroll Compressors with Enhanced Vapor Injection

The ZH heating compressor with enhanced vapor injection has been further optimized to enable heat pumps to efficiently produce water temperature up to 65°C during cold winter time. This is a new technology in space heating and tap water production, which permits traditional boilers to be replaced by heat pumps in retrofit applications without changing the radiators.

The ZH Copeland Scroll™ heating compressor with enhanced vapor injection has an additional port to inject vapor in the compression process. This improves the performance of the system by increasing the heating capacity for a given compressor displacement. Additional benefits are the reduction of the discharge temperature and the extension of the operating envelope for the production of high temperature water.

The ZH heating compressor reaches the same high standards of durability and reliability as any other Copeland Scroll™ compressor. This includes the ability to handle relatively large amounts of liquid, which is known to damage or break reciprocating compressors. Fewer moving parts, robust running gear and low vibration due to balanced compression mechanism make the ZH range of Copeland Scroll™ compressors the most reliable solution available on the heat pump market.

ZH Scroll Compressors

ZH Nomenclature Guidelines

ZH**K4E

Qualified for **R407C/R134a**

Without Enhanced Vapor Injection - ** capacity in Btu/h

ZH**KVE

Qualified for **R407C** only

Enhanced Vapor Injection – ** capacity in kW

ZH**K1P

Qualified for **R410A** only

Without Enhanced Vapor Injection – ** capacity in kW

ZH1**K1P

Qualified for **R410A** only

Enhanced Vapor Injection – ** capacity in kW

ZH R407C Compressor Line-up

Conditions: Evaporating -7°C, Condensing 50°C, Superheat 5K, Subcooling 4K

ZH R410A Compressor Line-up

Conditions: Evaporating -7°C, Condensing 50°C, Superheat 5K, Subcooling 4K

Features and Benefits

- Copeland Scroll™ axial and radial compliance for high reliability
- High efficiency and increased heating capacity
- High water temperature for all applications
- Low sound and low vibration level
- Tandem combination for superior seasonal efficiency
- Enhanced vapor injection technology for best seasonal efficiency

Maximum Allowable Pressure (PS)

- ZH(I)**K1P:
Low Side PS 28 bar(g) / High Side PS 45 bar(g)
- ZH12K4E to ZH45K4E:
Low Side PS 20 bar(g) / High Side PS 32 bar(g)
- ZH56K4E to ZH11M4E:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- ZH09KVE to ZH18KVE:
Low Side PS 20 bar(g) / High Side PS 32 bar(g)
- ZH24KVE to ZH48KVE:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

Operating Envelope R407C Heating

- ZH**K1P w/o Enh. Vapor Inj.
- - - ZH**K1P Transient 2000 Hours
- ZHI**K1P w/Enh. Vapor Inj.
- Wet Injection
- - - Wet Injection Transient 2000 Hours

Operating Envelope R410A Heating

- ZH**K4E w/o Enh. Vapor Inj.
- - - ZH**K4E Transient 2000 Hours
- ZH**KVE w/Enh. Vapor Inj.
- ZH**KVE Transient 2000 Hours
- Wet Injection
- - - Wet Injection Transient 2000 Hours

Refer to Emerson's Select 7.5 selection software for individual model operating envelopes and other refrigerants.

ZRH/ZBH Copeland Scroll™ Horizontal Compressor Range

in R407C and R134a, for the specific needs of transport air conditioning.

Air conditioning for passenger comfort is a pre-requisite in today's public transport vehicles. At the same time, maximization of passenger space and streamlining of high speed trains increasingly impose limitations on height.

ZRH compressors are based on the unique Copeland Scroll™ design and provide the same reliability as a standard Copeland Scroll™. The addition of an oil pump covers the specific needs of transport air conditioning and of horizontal compressor arrangement in general.

The low profile design and modulation capabilities of the ZRH compressor range are the ideal response to these market needs.

Horizontal Scroll Compressors

ZRH Scroll Compressors Line-up R407C

EN12900: Evaporating 5°C, Condensing 50°C, Superheat 10K, Subcooling 0K

Features and Benefits

- Compactness and low weight
- Horizontal design with less than 250mm height
- Copeland Scroll™ compliance for superior reliability and efficiency
- Additional oil-pump
- Reduction of potential risk of refrigerant leakage through the drive shaft sealing
- Capacity modulation from 70% to 150% for ZRHV/ZBHV

Maximum Allowable Pressure (PS)

- 29.5 bar

Operating Envelope R407C

Suction Gas Return 10°C / Subcooling 0K

Refrigeration Applications

Emerson offers a wide range of solutions for commercial refrigeration applications. With its long-lasting expertise in semi-hermetic reciprocating compressor technology as well as in scroll technology we can meet the requirements for most applications: at the small end just like at the large end of commercial refrigeration.

Completed by the various offerings in the segment of condensing units Emerson is able to offer the best solution and performance whether you are looking for applications in foodservice or – processing, supermarkets, hypermarkets, petrol stations or refrigerated warehousing.

Emerson's prime focus for its semi-hermetic reciprocating technology is at the large end of commercial refrigeration. Here aspects such as reliability, serviceability and the ability to implement capacity unloading mechanism are of importance and they are perfectly provided by Emerson's semi-hermetic reciprocating compressors. Innovations like the Discus and Stream technologies, digital modulation and CoreSense™ Diagnostics for advanced protection and preventive maintenance keep semi-hermetic at the forefront of compressor technology.

Especially when compact equipment, energy efficiency and reliability are musts, the scroll technology is the preferred choice for refrigeration applications. With developments such as vapor injection and digital modulation, scroll has become the leading technology and is widely recognized in the refrigeration market.

Whatever the chosen technology and product solution, Emerson's line-up meet the specific refrigeration needs covering the entire spectrum of medium and low temperature applications whether using standard HFC's, low GWP or natural refrigerants.

ZB Copeland Scroll™ Compressor Range for Medium Temperature Refrigeration using R404A, R134a, R407A/C and R22

Emerson Climate Technologies offers ZB compressors with a wide cooling capacity range starting from 3 kW to 26 kW. It includes digital compressor models that offer continuous capacity modulation technology.

Copeland Scroll™ compressors have 3 times less moving parts than reciprocating compressors and feature a scroll compliance mechanism which makes them particularly robust and reliable under severe conditions including liquid slugging.

They have the advantage of light weight and compactness, making them ideal for the usage in condensing units, compact refrigeration systems or special process units.

The Summit Series from 7 to 15 hp is designed to provide seasonal efficiencies 15% higher than traditional semi-hermetic compressors. These compressors are extremely quiet and can be fitted with an external sound shell for an additional 10 dBA sound reduction, which makes them best choice for refrigeration applications in urban and domestic areas.

The ZB range also features ZB220 (30hp), the largest refrigeration scroll available on the market. These compressors are qualified for R404A, R134a, R407A/C and R22.

For more details on digital model please refer to page 38 in the catalogue.

ZB Compressor for Medium Temperature Refrigeration

ZB and ZBD Compressor Line-up

Conditions EN12900, R404A: Evaporating -10°C, Condensing 45°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Wide operating envelope with 10°C condensing limit and fast pull down capabilities
- High seasonal efficiencies as scrolls are designed at the condition where equipment runs most of the time
- Light weight and compactness, more than half the weight of equivalent semi-hermetic compressors
- Availability of optional sound shell on all models providing an additional 10 dBA sound attenuation for silent operation
- Includes 6 digital scroll compressor models for simple, stepless 10 to 100% capacity modulation
- One model for multi refrigerants R404A, R407A/C, R134a, R22

Maximum Allowable Pressure (PS)

- ZB15 to ZB45:
Low Side PS 21 bar(g) / High Side PS 28.8 bar(g)
- ZB50 to ZB220:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZBD:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

Operating Envelope R404A

Operating Envelope R134a

Refer to Emerson's Select 7.5 selection software for individual model operating envelopes and other refrigerants.

ZF Copeland Scroll™ Compressor Range for Low Temperature Refrigeration using R404A, R407A and R22

Emerson Climate Technologies developed the ZF range to provide the best performance in low temperature. The range has a wide application envelope as it can operate from -40°C evaporating temperature to +7°C. They have been optimized in their design to perfectly fit frozen food application requirements. Thanks to their scroll compliance mechanism, these scroll compressors feature particularly high tolerance to liquid slugging.

The range consists of:

- The ZF*KCE models that operate with liquid injection in order to control discharge temperature and increase the operating envelope.
- The ZF*KVE models are optimized for vapor injection with use of a sub-cooler. This boosts refrigeration system's cooling capacity and efficiency.
- The ZF*K6E models that operate both with liquid injection or vapor injection.

ZF Compressor for Low Temperature Refrigeration

These compressors are qualified for R404A, R507, R407A, R22 and R134a for certain models. For more details on Digital Scroll™ model please refer to page 38 in the catalogue.

ZF and ZFD Compressor Line-up

Conditions 12900, R404A: Evaporating -35°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Wide operating envelope with 10°C low condensing temperature to minimize energy consumption
- One model for multi-refrigerants
- Light weight and compactness, more than half the weight of equivalent semi-hermetic compressor
- Optional Sound Shell allowing 10 to 12 dBA sound attenuation.
- ZF models with liquid injection
 - Easy, efficient and reliable injection via Discharge Temperature Control Valve (DTC) on the smaller models
- ZF models with Enhanced Vapour Injection
 - Seasonal efficiencies compared to Emerson's best semi-hermetic compressors
 - Improved system capacity and efficiency by 40% and 25% respectively, making them the most efficient compressors on the market.
 - Possibility to reduce the equipment and component sizes by using smaller compressors

Operating Envelope R404A

— ZF*K4E & ZF*KVE — Some Models (ZF24KVE-ZF48KVE)

Maximum Allowable Pressure (PS)

- ZF06 to ZF18 (K4E/KVE):
Low Side PS 21 bar(g) / High Side PS 28.8 bar(g)
- ZF24 to ZF48 (K4E/KVE/K6E):
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZFD:
Low Side PS 19 bar(g) / High Side PS 28 bar(g)

Refer to Emerson's Select 7.5 selection software for individual model operating envelopes and other refrigerants.

ZFD & ZBD Copeland Scroll™ Digital Range for Low and Medium Temperature Refrigeration

Copeland Scroll™ Digital ZBD and ZFD compressors for stepless continuous capacity modulation in low and medium temperature refrigeration applications.

Based on the unique Copeland Compliant Scroll® design, the Digital modulation operates on a simple mechanism. Capacity control is achieved by separating the scroll sets axially over a small period of time. It is a simple mechanical solution allowing precise temperature control and system efficiency.

Digital Scroll™ technology is a simple modulation solution that can easily and quickly be implemented into any existing system design as no other components are required.

Digital Scroll™ technology provides continuous, stepless modulation from 10% to 100% with no operating envelope restriction. As a result, system pressures and temperatures are tightly controlled. These compressors provide optimum performance for condensing units, refrigeration packs, process and agricultural units.

The Digital Scroll™ range consists of:

- ZBD models dedicated to medium temperature applications
- ZFD models with vapor injection for low temperature applications
- ZOD model designed for use in R744 (CO₂) - see page 42.

Copeland Scroll Digital™ for Low and Medium Temperature Refrigeration

These compressors are qualified for R404A, R407A and R22 (ZBD/ZFD).

Digital Scroll™ Compressor Line-up

Digital ZBD R404A Evaporating -10°C, Condensing 45°C, Suction Gas Temperature 20°C, Subcooling 0K
 Digital ZFD: R404A Evaporating -35°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Continuous modulation from 10% to 100% ensuring a perfect match of capacity and power to the desired load
- An economical and reliable alternative to variable speed drive
- Precise suction pressure control with associated energy savings
- Food quality is maintained by stable evaporating temperatures in the refrigerated areas
- Longer lasting refrigeration equipment due to fewer compressor cycling
- Quick and easy integration into refrigeration equipment, similar to any other scroll compressor
- Availability of optional sound shell on all model providing an additional 10dBA sound attenuation for silent operation
- Availability of Emerson's series of controllers that operate the Digital Scroll™ compressor

Maximum Allowable Pressure (PS)

- Digital ZBD:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)
- Digital ZFD:
Low Side PS 19 bar(g) / High Side PS 28 bar(g)

Operating Envelope R404A

Refer to Emerson's Select 7.5 selection software for individual model operating envelopes and other refrigerants.

ZO & ZOD Scroll Compressor Range for CO₂-Subcritical Refrigeration

ZO Copeland Scroll™ Compressors have been designed for use in R744 (CO₂) low temperature refrigeration systems. These compressors are suitable for usage in CO₂-subcritical cascade and booster systems.

Increasing environmental concerns about potential direct emissions from HFC-based refrigeration systems into the atmosphere have led to the revival of R744 in parts of the European refrigeration market. Regionally, this trend is reinforced by legislation and taxation schemes which favor the usage of refrigerant R744.

In comparison with HFC refrigerants, the specific properties of R744 require changes in the design of the refrigeration system. The ZO range of Copeland Scroll™ compressors has been particularly designed to exploit the characteristics of R744 refrigeration system. Efficiency, reliability and liquid handling advantages of the Copeland Scroll™ technology equally apply.

The optimized design of ZO compressors addresses effectively the challenges of R744 systems i.e. high pressure levels, higher mass flow for a given displacement while securing proper lubrication.

The range consists of 6 models including 1 digital model for 10 to 100% continuous cooling capacity modulation

ZO Compressor for Low Temperature Refrigeration

ZO and ZOD Compressor Line-up

Conditions EN12900 R744: Evaporating -35°C, Condensing -5°C, Suction Superheat 10K, Subcooling 0K

Features and Benefits

- Optimized for high efficiency in CO₂-subcritical cascade and booster systems
- High condensing temperature limit allowing for optimized overall system design
- Compact design minimizing required machine room space
- Half the weight of equivalent semi-hermetic compressors
- Optional Sound Shell allowing 10 dBA sound attenuation
- High bearing reliability and lubrication of all critical parts under all conditions including liquid slugging
- Availability of a digital model offering simple, stepless 10 to 100% capacity modulation

Maximum Allowable Pressure (PS)

- ZO:
Low Side PS 33 bar(g) / High Side PS 47 bar(g)
- Digital ZOD:
Low Side PS 33 bar(g) / High Side PS 43 bar(g)

Operating Envelope R744

Sound Shell for Copeland Scroll™ Compressors

Quiet Operation in Sound Critical Environment

Environmental noise has become a serious problem that can lead to potential contentious situations. It is particularly true for refrigeration applications where kitchen equipment or compressor packs are often source of disturbing noise in domestic areas.

Emerson Climate Technologies put sound minimisation at the centre of any of its new compressor development along reliability, seasonal efficiency and size and weight reduction.

A large portion of equipment acoustic emissions come from condensers and compressors and in some critical sound sensitive applications the refrigeration installations need to be acoustically insulated. Simple solutions are now available to contain sound emissions. Emerson Climate Technologies has developed a dedicated Sound Shell for all Copeland Scroll™ compressors from 2–15 hp. It completely encapsulates the compressor, minimizing sound leaks while cooling performance remains uncompromised.

Groundbreaking design techniques and materials, derived from the automotive industry, were utilized to design the Sound Shell. The use of low pressure reaction injection moulded parts (top cap cover, terminal box cover and compressor base plate) allows a 10–12 dBA sound attenuation.

It is a significant improvement over conventional sound jackets available from other suppliers that reduce sound by 3–6 dBA depending on the application. Particular attention was also paid in the design stage to ensure ease of mounting in retrofit, service and new installation situations.

S-Series and Scroll Booster Compressors

Compressors for the low stage in cascade or booster refrigeration systems are available as part of the semi-hermetic reciprocating compressors from 7.5 to 30 hp and as part of the scroll range from 2 to 15 hp. These provide optimized energy efficiency for refrigeration systems operating at low evaporating temperatures.

S-Series Booster Compressor Line-up

Conditions R404A: Evaporating -35°C, Condensing -10°C, Suction Gas Return 20°C, Subcooling 0K

Scroll Booster Compressor Line-up

Conditions R404A: Evaporating -35°C, Condensing -10°C, Suction Gas Return 20°C, Subcooling 0K

Features and Benefits - S-Series Booster

- Positive displacement oil pump for high oil feeding pressure ensuring good lubrication and bearing cooling
- PTFE coated bearings for especially low friction and good protection at start up
- Aluminum piston with optimized geometry for good performance and resistance to liquid handling
- High temperature resistant Molybdenum piston rings preventing wear
- Optimized bearing surface dimension
- Valve reeds of impact resistant spring steel
- Sensor for electronic Oil Pressure Switch OPS2 for durability
- Electronic motor protection module

Features and Benefits - Scroll Booster

- PTFE coated bearings for especially low friction and good protection at start up
- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Light weight and compactness, more than half the weight of equivalent semi-hermetic reciprocating compressors
- Availability of optional sound shell on all model providing an additional 10dBA sound attenuation for silent operation

Maximum Allowable Pressure (PS)

- S-Series booster:
Low Side PS 22.5 bar(g) / High Side PS 28 bar(g)
- Scroll booster:
Low Side PS 22.6 bar(g) / High Side PS 32 bar(g)

Semi-Hermetic Reciprocating Compressors

Emerson Climate Technologies offers different ranges of semi-hermetic reciprocating compressors with distinct levels of performance and technical characteristics depending on the application requirements:

The S-Series:

Its design is based on traditional “reed” valve plates similar as used in reciprocating compressors offered by other manufacturers. The performance of such compressors meets basic market requirements but cannot compete with Discus® compressors in terms of efficiency. The S-Series ranges from 1.5 to 70 hp and is composed of DK, DL, D2S, D3S, D4S, D6S and D8S presented in this catalogue.

The Discus® range:

It is broadly recognized as the most efficient compressor whatever the running condition. This range is mainly used in refrigeration medium and low temperature applications where system efficiency is a priority for the end-user. The key difference between Discus® and other reciprocating compressors lies in its valve plate design. Traditional “reed” valves are replaced by ‘puck” type valves that are integrated in the valve plate. This special design eliminates the dead volume at the end of the compression and allows for the highest compressor efficiency.

To date no other reciprocating compressor is able to match Discus® in terms of performance. Available from 4 to 60 hp they are referred to as D2D, D3D, D4D, D6D and D8D in this catalogue.

The Stream Series:

Emerson Climate Technologies introduces Stream, a brand new line of semi-hermetic 4 and 6 cylinder compressors. The Series provides best in class performance for today’s HFC-based and uprising natural and low GWP refrigerants, significantly reducing cost of operation and environmental impact compared to competing products.

The range is made of 4 and 6 cylinder models, available for inverter applications, and of 4 and 6 cylinder digital models for continuous capacity modulation.

The compressors can be fitted with a dedicated sound shell for sound sensitive applications.

The new Emerson Climate Technologies line-up of 4 cylinder compressors for CO₂-transcritical applications is the ideal solution for R744 medium temperature cascade and booster systems. It is characterised by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. In combination with the CO₂-subcritical scroll for the low temperature refrigeration side, Emerson Climate Technologies offers the most energy efficient package available on the market today.

With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment up-time, the Stream series is built to last in today’s modern changing world.

Emerson CoreSense™ Diagnostics for Refrigeration

Emerson CoreSense™ Diagnostics is an innovative technology for Copeland® Stream refrigeration compressors. It goes beyond compressor protection by assisting in system diagnosis and optimization. Providing service engineers with detailed information at the right time, system related problems can be diagnosed faster or even before they occur. Supermarket operators benefit from increased system uptime, reduction in food loss and reduced maintenance costs.

Technical Specification

- Power supply 120/240V AC, 24V AC
- Front end: 2 x LED, red/yellow, green
- Communication protocol (Modbus®RTU)
- Bus to system controller: RS 485, 3-wire, (+,-,GND)
- Discharge temperature sensor
- Current sensor and sensor module
- Flash memory
- Alarm reset button with remote reset capability
- IP 54

Benefits

- Reduce applied system costs
- Manage on-site compressor data
- Facilitate predictive maintenance & advanced diagnostics
- Reduce maintenance costs
- Increase system uptime / reduce food loss

Emerson CoreSense™ Diagnostics for Refrigeration.
Ensuring Best Performance over Full Lifetime.

Functions

Scope of Supply

Copeland® Stream With CoreSense™ Diagnostics, Semi-Hermetic Reciprocating Compressors For HFC

Stream series 4 and 6 cylinder compressors provide best in class performance, thereby significantly reducing cost of operation and environmental impact compared to competing products. With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment uptime, Stream series is built to last in today's modern changing world.

Features and Benefits

- Range of 16 models from 62 to 153m³/h
- Best-in-class seasonal efficiencies, up to 15% higher than market standard
- Multi-refrigerant compressor as it is compatible with R404A, R134a, R407A/C and R22
- Stepless capacity modulation by means of inverter or Digital modulation (see separate data sheet)
- Wide Operating Envelope covering Low and Medium Temperature Refrigeration without cooling fan
- Reduced sound level, dimensions and weight by up to 45 kg

CoreSense™ Diagnostics Features

- Motor and oil protection
- Storage of compressor asset and advanced runtime information
- Runtime/alarm signalling using multi-colour LED flash-codes
- Communication to system controller via Modbus®
- Individual compressor power monitoring

Copeland® Stream compressor
Designed to Deliver Best-in-Class Performance

Copeland® Stream Compressors with CoreSense™ Diagnostics for R744-Transcritical Applications

Stream series of 4 cylinder CO₂ compressors is the ideal solution for R744 medium temperature cascade and booster systems. It is characterized by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. All compressors are equipped with CoreSense™ technology and offer the possibility to diagnose system-related problems faster or even before they occur.

Features and Benefits

Stream provides for flexibility in pack design and operation

- Compact dimensions
- Integrated high and low pressure relief valve
- Discharge Temperature Protection
- Service valve 360° rotation for ease of piping design
- 2 sight glasses for mounting of oil management control and visual inspection
- One additional sight glass for oil visual inspection at run time
- One oil port for oil equalization in parallel system
- Oil splasher system ensuring lubrication at constant and variable speed

Designed for durability and performance in R744 applications

- Low sound, low vibration and large discharge chamber to eliminate pulsation
- High design pressures of 135 bar (high side) and 90 bar (low side)
- Burst pressures in excess of safety factor 3
- Cylinder head and discharge plenum design minimizing heat transfer to suction side
- Stepless capacity modulation via inverter from 25 to 75 Hz
- Copeland® CoreSense™ Diagnostics
- Individual compressor power consumption monitoring

*Copeland® Stream Compressors for R744 Refrigeration
Designed for Durability and Best-in-Class
Performance in CO₂-Transcritical Applications*

Copeland® Stream Digital with CoreSense™ Diagnostics for Continuous Capacity Modulation

Stream Digital series 4 and 6 cylinder compressors provide an alternative means of continuous modulation to inverter. Digital modulation is the most simple and precise method of capacity control and helps to contain applied costs associated with modulation.

Digital technology is based on controlling a high cycle solenoid valve fitted on one of the cylinder heads based on cycle time.

The valve actuates a piston that controls the flow of gas into the suction area of the Stream valve plate.

The compressor always run at constant speed which resolves the challenges related to oil return, mechanical and electrical stress on the system.

All compressors are equipped with CoreSense™ technology and offer the possibility to diagnose system related problems faster or even before they occur.

Copeland® Stream Digital compressor

Features and Benefits

- Range of 16 Models from 62 to 153 m³/h
- Multi-refrigerant compressor as it is compatible with R404A, R134a, R407A/C and R22
- Continuous modulation from 50–100% (4-cylinder) and 33–100% (6-cylinder) ensuring a perfect match of capacity and power to refrigeration load
- Economical and reliable alternative to frequency inverters
- Precise suction pressure control with associated energy savings and stable evaporating temperatures
- Quick and easy integration into refrigeration equipment, similar to any other standard compressor
- Possibility to easily retrofit existing installations with digital cylinder head kit
- No vibrations or mechanical stress on system piping and compressor parts
- Reduced compressor cycling for longer contactor and compressor life
- Emerson CoreSense™ Diagnostics technology providing advanced protection, diagnostics and preventive maintenance

Discus® Reciprocating Compressor Range

From 2 to 8 cylinder semi-hermetic reciprocating compressors for medium / low temperature refrigeration applications.

The key difference between Discus® and traditional reciprocating technologies lies in the valve plate design. The Discus® valve plate allows gas to flow into the cylinders with a minimum heat gain, while suction cavities are designed to smoothly route the gas to minimize losses. These effects lead to:

- Superior cooling capacity due to no re-expansion volume
- Up to 10% higher efficiency compared to conventional “cost-effective” reed type compressors
- Lower operating costs for the end-user

The Discus® ranges from 5 to 70 hp and provide cooling capacities from 8 to 96 kW in medium temperature (R404A, -10/45°C) and 2 to 35 kW in low temperature (R404A, -35/40°C). These compressors are qualified for R404A, R507, R134a and R22. All Discus® compressors are designed to deliver maximum performance and reliability:

- Discus® “puck” valve integrated into the valve plate for highest performance whatever the operating condition
- Positive displacement high flow oil pump guarantees high oil feeding pressure for good lubrication and bearings’ cooling

Discus® compressor

- PTFE coated bearings for especially low friction and good protection at start up
- Electronic motor protection module
- Availability of two motor sizes per displacement. The small motor covers all refrigeration applications while the large motor can be used in comfort or inverter applications

Discus® Compressor Line-up

Conditions: EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Highest level of efficiency available on the market, whatever the refrigerant and operating condition
- Integrated oil pump and Electronic Oil Pressure Switch OPS2 for maximum reliability
- Two motor sizes per displacement, optimized for different applications
- Large operating envelope that allows medium and low temperature applications to be covered by one single model with condensing limit as low as 5°C
- Provide cooling capacity modulation either by cylinder head blocked suction or with use of frequency inverters from 25 to 60Hz
- Multi-refrigerant compressor range – one model to cover all standard refrigerants

Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

Refer to Emerson's Select 7.5 selection software for individual model operating envelopes and other refrigerants.

Suction Gas Return 20°C / Subcooling 0K

*Suction Superheat 10K / Subcooling 0K

High Discharge Temp - Additional cooling required

S-Series Reciprocating Compressor Range

From 2 to 8 cylinder semi-hermetic reciprocating compressors for medium / low temperature refrigeration and comfort applications.

The S-series ranges from 5 to 70 hp and provide cooling capacities from 11 to 90 kW in medium temperature (R404A, -10/45°C) and 4 to 29 kW in low temperature (R404A, -35/40°C). These compressors are qualified for R404A, R507, R134a, R22 and R407C (some models).

The S-series comprises the 2S, 3S, 4S, 6S and 8S models. It is suction gas cooled and uses reed valve technology, found on all reciprocating compressors except Discus® and Stream. It is suited for numerous single or multi-compressor applications such as condensing units or compact compressor packs for medium to large supermarkets.

All compressors are designed for unquestionable reliability.

- Positive displacement high flow oil pump guarantees high oil feeding pressure for good lubrication and bearings' cooling
- PTFE coated bearings for especially low friction and good protection at start up
- Aluminium piston with optimized geometry for good performance and resistance to liquid handling
- High temperature resistant Molybdenum piston rings preventing from wear

S-Series Compressor

- Optimized bearing surface dimensions
- Valve reeds of impact resistant spring steel
- Pre-set internal pressure relief valve between suction and discharge that opens if the maximum differential pressure is exceeded
- Electronic motor protection module

S Series compressor Line-up

Conditions: EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Integrated oil pump and Electronic Oil Pressure Switch OPS2 for durability
- Two motor sizes per displacement, optimized for different applications
- Ability of the refrigeration compressors with small motor size to operate as low as 10°C condensing
- Large operating envelope that allows medium and low temperature applications to be covered by one single model
- Provide cooling capacity modulation either by cylinder head blocked suction or with use of frequency inverters from 25 to 60Hz with the standard AWM motors
- Multi-refrigerant compressor range – one model to cover all standard refrigerants

Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

Operating Envelope R404A

Suction Gas Return 20°C / Subcooling 0K

*Suction Superheat 10K / Subcooling 0K

High Discharge Temp - Additional cooling required

DK and DL Reciprocating Compressor Range

Small 2-cylinder semi-hermetic reciprocating compressors for medium and low temperature refrigeration applications and transport refrigeration.

These small compact compressors are ideal for medium and low temperature refrigeration applications and for integration in condensing units or refrigerated transport systems.

Designed on the principle of standard reed valve type technology, these compressors feature an internal oil pump that guarantees optimum reliability in all operating conditions.

The DK-series ranges from 0.5 to 2 hp and the DL-series from 2 to 4 hp and provide cooling capacities from 1.5 to 9 kW in medium temperature (R404A, -10/45°C) and 0.5 to 3.5kW in low temperature (R404A, -35/40°C).

These compressors are qualified for R404A, R507, R134a and R22.

K & L Series compressor Line-up

Conditions EN12900, R404A: Evaporating -10°C, Condensing 40°C, Suction Gas Temperature 20°C, Subcooling 0K

Features and Benefits

- Large operating envelope from 5°C to -45°C evaporating and up to 55°C condensing
- Two motor sizes per displacement, optimized for different applications
- Compact and light compressors
- Ideal for condensing unit or transport applications
- Integrated oil pump for maximum reliability

Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)/ High Side PS 28 bar (g)

Operating Envelope R404A

Condensing Units

Emerson Climate Technologies offers the broadest and most reliable condensing unit product line-up. Leveraging the latest compressor technology, each platform provides you the option to select the refrigerant, capacity and application temperature combinations that meet your requirements.

A huge variety of Copeland® indoor and outdoor condensing units offer the right solution for applications in food retail and food service, commercial and industrial refrigeration.

Copeland EazyCool™ Scroll Outdoor Condensing Units are designed and fully equipped for a quick and easy installation and ideal to integrate into urban environments. The latest scroll technology is combined with high quality Alco components and covered by a weatherproof housing in a unique design.

The Copeland EazyCool™ Outdoor Condensing Unit ZX Series offers the highest energy efficiency available in a standard unit to lower operators' utility bills. Ranging in size from 2 to 7.5 hp the ZX units are perfectly suited for typical food service and retail applications. The key benefits compactness, silence and efficiency of the standard models will be enhanced by the capability of continuous capacity modulation of the ZX Digital models. This makes ZX Digital condensing units the perfect fit for applications with wide load variations.

Copeland Scroll™ indoor condensing units are equipped with the latest refrigeration scroll compressors and constitute the widest range of their kind. The modular line concept offers base units which can be adapted to the target application by various options including weather housings and fan speed controls.

Copeland Scroll™ Digital Receiver Units HLR are an innovative offering for food service and retail businesses. Their compact design and the power of digital scroll continuous capacity modulation enable optimized environmental integration with highest system efficiency.

Semi-hermetic condensing units: robust, reliable and efficient air-cooled condensing unit platforms featuring semi-hermetic reciprocating compressor technology are for use in high, medium and low temperature refrigeration applications. Products range from 0.8 to 40 hp and are available for R134a, R404A, R407C and R22 refrigerants

Copeland EazyCool™ Outdoor Condensing Units with Scroll Compressors

Copeland® air-cooled outdoor condensing units for medium temperature and low temperature applications.

Emerson Climate Technologies has developed this series of condensing units especially for outdoor use. The latest Scroll technology is combined with high quality components and covered by an absolutely weather resistant synthetic resin housing in a unique design.

The EazyCool line-up offers state of the art technology and models featuring stepless capacity control, vapor injection and fan speed control. This makes it the first choice for target applications in food retail and food service:

- Proximity and convenience stores
- Mini markets and supermarkets
- Bars, restaurants and kitchens
- Beer cellars and beverage coolers

Copeland EazyCool™ Outdoor Condensing Units with Scroll Compressors

EazyCool™ OLQ/OMQ Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/ LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

EazyCool™ Digital Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/ LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Features and Benefits

- Standard equipment: Scroll compressor(s), crankcase heater(s), condenser with thermally protected fan(s), fan speed control, HP and LP switch, liquid receiver, weather resistant housing
- Suitable for multiple refrigerants: R404A, R507, R134a, R407C, R22
- Wide range of quality accessories
- Excellent efficiency

Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g)
- High Side PS 28 bar (g)

Copeland EazyCool™ Outdoor Condensing Units for Refrigeration Networks

Copeland® outdoor condensing unit networks for medium temperature and low temperature applications.

Emerson Climate Technologies has developed this version of outdoor scroll condensing units with interconnectivity in order to create medium and large size refrigeration network systems.

The EazyCool condensing unit networks perfectly fit in applications where larger cooling capacities and capacity modulation are required.

Typical applications are:

- Cold and freeze stores
- Discount and convenience stores
- Supermarkets and mini-markets
- Petrol station forecourts

Copeland EazyCool™ Outdoor Condensing Units for Refrigeration Networks

Copeland EazyCool™ Network Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Features and Benefits

- Standard equipment: Copeland Scroll™ compressor(s), crankcase heater(s), condenser with thermally protected low speed fan(s), fan speed controller, oil separator, suction and liquid equalization lines, HP and LP switch, oil reservoir, EC2 Electronic controller, weather resistant housing
- Oil control system with oil separator, TRAX OIL on each compressor, oil distribution lines and additional liquid receiver unit for large networks
- LON Master/Slave communication
- Capacity modulation with up to 8 compressor or step less with Digital Scroll™
- Perfect capacity adjustment by a wide range of combination opportunities

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar(g)
- High Side PS 28 bar(g)

Copeland EazyCool™ ZX Outdoor Condensing Units with Scroll Compressors

Copeland® compact outdoor condensing units for medium temperature and low temperature applications.

With this new range of outdoor condensing units Emerson Climate Technologies offers a solution for refrigeration applications with space and noise constraints which responds to the increasing demand for energy efficient condensing units.

Copeland EazyCool™ ZX outdoor condensing units feature the most complete and unique equipment. Their diagnostics module detects and displays the system status, it can communicate and transmit an alarm signal to a remote receiver. Vapor injection and liquid injection technology significantly increase system efficiency and operation map. Electronic protection functions, oil separator and suction accumulator guarantee optimum system safety.

Lowest life cycle costs and comprehensive safety features make Copeland EazyCool ZX a cost efficient and reliable choice for:

- Convenience stores
- Cold rooms
- Fast food stores, bars and restaurants
- Beverage coolers

Copeland EazyCool™ ZX Outdoor Condensing Units with Scroll Compressors

Copeland EazyCool™ ZX Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Copeland EazyCool™ ZX Digital Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Features and Benefits

- Standard equipment: Copeland Scroll™ compressor, crankcase heater, diagnostics module, fan(s) with speed control, liquid receiver, adjustable LP switch, safety switches, filter drier and sight glass, oil separator and suction accumulator (LT models only)
- Copeland EazyCool™ ZX Digital models allow for 10% to 100% continuous capacity modulation
- Diagnostic capabilities protect the unit from over-current, phase loss and phase imbalance
- LED display shows real time system status
- Energy and operation cost saving due to excellent energy efficiency
- Noise attenuation due to low speed fan motors with sickle blades and fan speed control
- Vapor injection technology for LT models
- Space saving due to compact dimensions
- Easy and quick installation

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS 30 bar (g)

Copeland Scroll™ Indoor Condensing Units for Refrigeration

Copeland® air-cooled condensing units for medium temperature and low temperature applications.

Copeland Scroll™ condensing units are equipped with the latest refrigeration scroll compressors and build the widest range of its kind. The modular line concept offers base units which can be adapted to the target application by various options including weather housings and fan speed controls.

Copeland Scroll™ condensing units are available with normal or high capacity condensers to ensure optimum performance even under extreme conditions. They are equipped with dedicated medium or low temperature compressors which makes them suitable for all general refrigeration applications, such as:

- Mini markets and supermarkets
- Bars, restaurants and kitchens
- Beer cellars and beverage coolers
- Cold rooms
- Milk cooling tank

*Copeland Scroll™
Indoor Condensing Unit*

Copeland Scroll™ Condensing Units Line-up

Conditions EN13215 R404A: Evaporating Temperature MT -10°C/LT -35°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Copeland Scroll™ Digital Condensing Units Line-up

Conditions EN13215 R404A: Evaporating Temperature -10°C, Ambient Temperature 32°C, Suction Gas Return 20°C

Features and Benefits

- Standard equipment: base plate, scroll compressor, crankcase heater, condenser with 1ph fan(s), HP and LP switch, liquid receiver with rotalock-valve, suction- and discharge shut-off valves
- Suitable for multiple refrigerants: R404A, R507, R134a, R407C, R22
- Wide range of quality accessories
- Excellent efficiency

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

Digital Receiver Unit HLR

Copeland Scroll™ Digital Receiver units are the perfect choice for remote condenser systems.

This series of condensing units is equipped with 2, 3, 4 or 6 cylinder semi-hermetic compressors with Discus® valve technology.

These Copeland Scroll Digital™ receiver units are an innovative offering by Emerson Climate Technologies for food service and retail businesses. Their compact design and the power of Digital Scroll™ continuous capacity modulation allow for optimized environmental integration at highest system efficiency.

Eight models with single or tandem compressors cover the need of medium temperature refrigeration capacities in various applications. The continuous capacity modulation always provides the right performance, especially for system with multiple evaporators and variable loads. The remote condenser concept allows for optimal building integration.

Digital Receiver Unit HLR

Digital Receiver Unit HLR Line-up

Features and Benefits

- Standard equipment: Digital Scroll™ compressor, liquid receiver, liquid line with filter drier and sight glass, HP/LP switch, complete electrical box including controller with overload protection and communication interface
- Continuous capacity modulation 10-100 % (Single) or 5-100 % (Tandem)
- Precise suction pressure control
- Maximum system flexibility by free choice of third party condensers
- Excellent energy efficiency
- High reliability
- Easy and quick installation

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28/32 bar (g)

Semi-Hermetic Condensing Units DK/DL

Copeland® air-cooled indoor condensing units for medium temperature and low temperature applications.

Long term engineering and manufacturing experience have led to these condensing units with reed valve technology compressors. Their excellent quality and reliability is traditionally well known in the refrigeration industry.

This series of condensing units is equipped with single fan or twin fans which allows for very compact dimensions. The wide range of models offers solutions for most applications including operation in extreme conditions like high evaporation temperatures and high ambient temperatures.

Semi-Hermetic Condensing Unit DK/DL

Semi-Hermetic DK/DL Condensing Units Medium Temperature Line-up

Conditions EN13215 R404A: Evaporating Temperature -10°C, Suction Gas Return 20°C, Subcooling 0K

Semi-Hermetic DK/DL Condensing Units Low Temperature Line-up

Conditions EN13215 R404A: Evaporating Temperature -45°C, Suction Gas Return 20°C, Subcooling 0K

Features and Benefits

- Standard equipment: compressor, condenser with thermally protected fan(s), discharge line with flexible pipe loop or vibration absorber, liquid receiver with shut-off-valve, HP/LP switch with automatic reset
- Suitable for a broad range of refrigerants: R404A, R507, R134a, R407C, R22
- Wide range of quality accessories
- Proven reliability

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

Standard Semi-Hermetic Condensing Units

Copeland air-cooled indoor condensing units for medium temperature and low temperature applications.

Long term engineering and manufacturing experience have led to this complete range of condensing units featuring semi-hermetic reciprocating compressor technology for use in high, medium and low temperature applications. Their excellent quality and reliability is traditionally well known in the refrigeration industry.

This series is equipped with compressors using reed valve technology which provide 0.5 to 40 hp motor power. The wide range of models offers solutions for most applications including operation in extreme conditions like high evaporation temperatures and high ambient temperatures.

Standard Units Line-up

Conditions EN13215 R404A: Evaporating Temperature LT -45°C/MT -10°C, Suction Gas Return 20°C, Subcooling 0K

Features and Benefits

- Standard equipment: compressor, condenser with thermally protected fan(s), discharge line with flexible pipe loop or vibration absorber, liquid receiver with shut-off-valve, HP/LP switch with automatic reset, oil pressure safety control OPS2
- Multiple choice of refrigerants incl. R404A, R134a and R22
- Robust design with good component accessibility
- Wide range of quality accessories
- Proven reliability

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

Condensing Units with Semi-Hermetic Discus® Compressors

Copeland® air-cooled indoor condensing units for medium temperature and low temperature applications.

In a further approach to improve compressor performance and reduce compression losses Emerson Climate Technologies engineers developed the Discus® valve technology.

This series of condensing units is equipped with 2, 3, 4 or 6 cylinder semi-hermetic compressors with Discus® valve technology. The models are specifically suitable for those applications where high efficiency and low energy consumption is required.

The wide range of compressor models combined with 2 or 4 fan high capacity condensers covers most application needs of low temperature and medium temperature applications.

Condensing Units with Semi-Hermetic Discus® Compressors

Discus® Condensing Units Line-up

Features and Benefits

- Standard equipment: Discus® compressor, condenser with thermally protected fan(s), discharge line with flexible pipe loop or vibration absorber, liquid receiver with shut-off-valve, HP/LP switch with automatic reset, oil pressure safety control OPS2
- Suitable for multiple refrigerants: R404A, R507, R134a, R407C, R22
- Wide range of quality accessories
- Excellent efficiency
- Proven reliability

Maximum Allowable Pressures (PS)

- Low Side PS 22.5 bar (g)
- High Side PS = 28 bar (g)

Technical Overview

Alco Controls

Alco Controls is the leading provider of precision electronic and electromechanical controls for the refrigeration and air conditioning markets. We continue to pioneer the control of refrigerant flow with innovative designs, keeping system performance optimization as central to our product development.

The wide range of Emerson controllers covers all major applications in commercial air conditioning and refrigeration, as well as heat pump systems. There are stand alone controllers and controllers with a communication interface, which can be used in LON networked systems too.

The controllers with TCP/IP Ethernet communication feature a full web server function and provide full data exchange with any user in the World Wide Web. This allows quick and inexpensive monitoring from any PC with a standard web browser.

Emerson offers drivers and superheat controllers designed for the EX4 to EX8 range of electrically driven control valves. The superheat controllers allow stable superheat control with the EX valves, while the digital superheat controllers can be synchronized with the PWM capacity control valve incorporated in the Digital Scroll™ compressor technology.

Display case and cold room controllers provide all functions needed to run commercial refrigeration, like superheat control with electrical control valve, thermostat, fan and defrost control, integrated timer and alarm functions.

Other controllers offer control functions on the “hot side” of the refrigeration circuit: condenser and condensing unit controllers, rack controllers for up to 8 single stage compressors or for multi-stage compressors and dual circuit controllers.

The compressor soft starter allows to keep the starting current below the limit imposed in residential heat pump applications.

Electronic fan speed controllers help to maintain a minimum condensing pressure by reducing fan speed at low ambient temperature.

Sensors and accessories are needed in conjunction with the above mentioned controllers.

Emerson’s controls portfolio is completed by offering a variety of mechanical controls as:

- oil management systems,
- pressostats & thermostats,
- system protectors,
- and valves.

Whatever control you choose you can always expect high reliability and best performance.

Electrical Control Valves

Electrical Control Valve Technology

Thermostatic expansion valves and mechanical regulator valves have been used in the refrigeration and air conditioning industry to control superheat and refrigerant mass flow since its very beginning. As today's systems require improved energy efficiency, tighter temperature control, wider range of operating conditions and incorporate new features like remote monitoring and diagnostics, the application of electronically operated valves becomes mandatory. Only they offer the controls performance necessary to meet these needs. Electrical control valves are actuators only. For operation in a system they need sensors, valve drivers and controllers, see next chapter.

EXM/EXL biflow valves for OEM use are equipped with an unipolar stepper motor drive. They are mainly used for heat pumps, air conditioning and close control.

EX2 is designed for pulse width modulation. It is applicable to all common HCFC and HFC refrigerants and for subcritical CO₂ applications and is used mainly for refrigeration applications such as display cases. The EX2 valve is a slide type solenoid valve with an orifice for expansion. It is either completely open or completely closed. One common valve body can be combined with 6 interchangeable orifices to cover 7 capacity ranges.

EX4/EX5/EX6/EX7/EX8 consist of two main internal assemblies, the valve and the stepper motor. The stepper motor is located next to the electrical plug and connected directly to the slide and cage assembly of the valve. Similar

to the technology used in compressors, the motor is exposed to refrigerant and lubricant and the materials used are identical to the ones in compressor motors. The housing of the motor and valve assembly is made from stainless steel and fully hermetic, utilising exclusively brazing and welding technologies and eliminating all gaskets.

This design offers several technical advantages such as proportional linear mass flow and a wide capacity range.

A common feature of all EX2, EX4-8 electrical control valves is the positive shut-off function, which eliminates the need for additional solenoid valves.

CX4/CX5/CX6/CX7 High Pressure Expansion Valves are stepper motor driven valves for precise control of R744 (CO₂) refrigerant mass flow in air conditioning, refrigeration, heat pump applications. The Control Valves can be also used for liquid injection duty and hot gas bypass.

Valve Selection

For **EX2** the published table quotes capacities at 100% duty cycle. i.e. valve open continuously. However, it is recommended to operate the valve at partial load (50-80%) to allow for system load fluctuations.

For **EX4/EX5/EX6/EX7/EX8** and **EXM/EXL** all published capacities are maximum and there are no reserve capacities. Each valve should be selected for the highest possible capacity of the system. A wide range regulation (10 ... 100%) with one slide orifice for each valve is achievable. To facilitate valve dimensioning for other than the standard conditions Emerson Climate offers an Excel based Alco® selection tool. This can be downloaded from www.emersonclimate.eu.

Selection Table for Electrical Control Valves and Applicable Controllers

Valve type	Function	Capacity kW R407C	Feature	Min. Evaporating Temp. °C	Main Application	Page	Applicable Controller	Page
EXM EXL	Expansion Valve	5 .. 20.7	Uni polar stepper motor driven	-30	Heat pumps, Air Conditioning, Close Control	113	Customized	s. data sheet

CX4 CX5 CX6 CX7	Expansion Valve		Bi polar stepper motor driven	-	Refrigeration	136	EXD-U .. Universal Controls	142

Electrical Control Valves Series EXM/EXL

for OEM use, stepper motor driven

Features

- Unipolar stepper motor
- Bi-flow (same performance in both flow directions in term of capacity and MOPD)
- High MOPD: 35 bar
- Removable coils in two versions: 12VDC/24VDC
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Linear flow
- Resolution: 500 pulses (half steps) or 250 full steps
- Hermetic design
- Only Bulk packing in boxes of 10 pieces
- Minimum order quantity 100 pcs (per type and delivery)

EXM/EXL with Coil

Options:

- Special version for transcritical R744 (CO₂) with 140 bar maximum allowable pressure upon request

Selection Chart

Type	Part No.	Description	R410A	Nominal Capacity kW			Connection size/style
				R407C	R22	R134a	
EXM-B0B	800 400M	Valve less coil	5.5	5.0	4.8	3.7	1/4" ODM
EXM-B0D	800 401M	Valve less coil	11.6	10.5	9.9	7.7	
EXM-B0E	800 402M	Valve less coil	13.7	12.4	11.8	9.1	
EXM-125	800 403M	Coil 12VDC, 5 wires	-	-	-	-	
EXM-246	800 404M	Coil 24VDC, 6 wires	-	-	-	-	
EXL-B1F	800 405M	Valve less coil	17.0	15.4	14.6	11.3	1/4" ODF 8 mm ODM
EXL-B1G	800 406M	Valve less coil	23.0	20.7	19.7	15.2	
EXL-125	800 407M	Coil 12VDC, 5 wires	-	-	-	-	
EXL-246	800 408M	Coil 24VDC, 6 wires	-	-	-	-	

The nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R410a	+4°C	+38°C	1K

Technical Data

Max. allowable pressure PS	45 bar
MOPD	35 bar (normal or reverse flow)
Temperature range TS	TS: -30 to +70°C (liquid refrigerant) -30 to +60°C (ambient)
CE marking	Not required
Weight	Valve EXM: 65 g, EXL: 76 g Coil EXM: 124 g, EXL: 156 g
Package and delivery	Bulk pack with 10 pieces

Stepper motor type	Uni-polar, constant voltage
Full travel time	16.6 seconds at 30 pulse/sec. 5.5 seconds at 90 pulse/sec
Reference position	Mechanical stop at fully close position
Total number of pulses	500 half step (250 full step)
Insulation class	EXM: A EXL: E
Cable length	1m

Electrical Control Valves Series EX2

Pulse width modulated with exchangeable orifices

Can be used with EC2 display case controllers (see page 145)

Features

- Pulse width modulated
- Shut off function eliminates the necessity of a separate solenoid valve
- Dampened plunger reduces noise effects of water hammer
- One valve body can be combined with 6 orifices to make 7 capacity ranges up to 18.7 kW (R407C)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO₂ applications
- Long lifetime, high reliability
- PS: 40bar, TS: -40 to +65°C

EX2 with Orifice

Selection Chart

Type	Part No.	Function	Capacity Q _n at 100% open Valve (kW) *					
			R134a	R22	R404A	R507	R407C	R744
EX2-M00	801 091	10 mm inlet / 12 mm outlet ODF	13.3	17.2	12.1	12.1	18.7	35.0
EX2-I00	801 090	3/8" inlet / 1/2" outlet ODF						
EXO-004	801 089	Orifice 4	8.5	10.9	7.7	7.7	11.8	22.2
EXO-003	801 088	Orifice 3	5.6	7.2	5.1	5.1	7.8	14.6

EXO-001	801 086	Orifice 1	2.5	3.2	2.3	2.3	3.5	6.5
EXO-000	801 085	Orifice 0	1.2	1.6	1.1	1.1	1.7	3.3
EXO-00X	801 084	Orifice X	0.7	0.9	0.6	0.6	1.0	1.8
ASC 24V	801 062	Coil 24 VAC 50-60HZ (8W)						

* Orifice should be selected at max. 80% of Q_n to allow covering the load fluctuation.

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R507	+4°C	+38°C	1K
R744	-40°C	-10°C	1K

For other operating conditions an Excel based selection tool can be downloaded from www.emersonclimate.eu, or use correction factors with following formula:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

- Q_n: Nominal valve capacity
 Q_o: Required cooling capacity
 K_t: Correction factor for evaporating and liquid temperature
 K_{Δp}: Correction factor for pressure drop at valve

Electrical Control Valves Series EX4, EX5, EX6, EX7 & EX8

Features

- Multifunction as expansion valve, hot gas bypass, suction gas throttling, head pressure, liquid level actuator etc
- Fully hermetic design (no thread joints between valve body and motor compartment)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO₂ applications
- Stepper motor driven
- Short opening and closing time
- Very fast full stroke time
- High resolution and excellent repeatability
- Positive shut-off function to eliminate use of additional solenoid valve
- Bi-flow versions for heat pump applications
- High linear flow capacity
- Extremely wide capacity range (10 ... 100%)
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Direct coupling of motor and valve for high reliability (no gear mechanism)
- Ceramic slide and port for highly accurate flow and minimal wear
- Europe patent No. 0743476, USA patent No. 5735501, Japan patent No. 28225789
- Balanced force design
- Corrosion resistant stainless steel body and stainless steel connections
- PS: 45 bar
- Liquid Inlet Temperature TS:
Uniflow: -50 to +100°C, Biflow: -40 to +80°C

Selection Chart (Capacities see following pages)

Type	Part No.	Flow Pattern	Capacity Range	Inlet Connection	Outlet Connection	Electrical Connection
EX4-I21	800 615	Uni-flow	10 ... 100%	3/8" ODF	5/8" ODF	M12 Plug
EX4-M21	800 616			10mm ODF	16mm ODF	
EX5-U21	800 618			5/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I21	800 620			7/8" ODF	1-1/8" ODF	
EX6-M21	800 621			22mm ODF	28 mm ODF	
EX7-I21	800 624			1-1/8" ODF	1-3/8" ODF	
EX7-M21	800 625			28mm ODF	35mm ODF	
EX8-M21	800 629			42mm ODF	42mm ODF	
EX8-U21	800 630			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	
EX8-I21	800 631			1-5/8" ODF	1-5/8" ODF	
EX4-U31	800 617	Bi-flow (Heat Pump)		5/8" (16mm) ODF	5/8" (16mm) ODF	
EX5-U31	800 619			7/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I31	800 622			1-1/8" ODF	1-1/8" ODF	
EX6-M31	800 623			28mm ODF	28mm ODF	
EX7-U31	800 626			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	

Type	Part No.	Temperature Range	Length	Connector type to valve	Connector type to driver or controller	Illustration
EXV-M15	804 663	-50 ... +80°C	1.5 m	M12, 4 pins	Loose wires	
EXV-M30	804 664		3.0 m			
EXV-M60	804 665		6.0 m			

Capacity Data

Application Expansion Valve and Liquid Injection Valve - Nominal Capacity kW

Valve Type	R407C	R22	R134a	R404A	R410A	R23 *	R124 *	R744

EX8	100 .. 925	90 .. 880	70 .. 680	60 .. 613	100 .. 1027	-	-	180 .. 1789

* Biflow versions are not released for R124 and R23
Capacity for biflow versions identical in both flow directions.

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R410A	+4°C	+38°C	1K
R124	+20°C	+80°C	1K
R23	-60°C	-25°C	1K
R744	-40°C	-10°C	1K

Guideline for Selection of Electrical Control Valves as Expansion Valves

Alco® Selection Tool

For easy and quick selection of Electrical Control Valves an Excel based selection tool can be downloaded from the Internet at www.emersonclimate.eu, or use the quick selection tables on the following pages.

The following guideline should be taken into consideration in order to obtain full advantages of the control valves:

- **Published capacities are maximum and there are no reserve capacities**
- Larger size of valve leads to shorter pull down period and shorter travel time i.e. faster response. For example, EX7 has maximum 3.2 seconds travel time. The valve has approximately 1.6 seconds travel time at 50% capacity operation.

Example:

System with R407C having two different operating conditions:

A) 110 kW capacity at +4°C/+50°C with two stages compressor at 50% / 100% capacity

B) 137 kW capacity at +4°C/+30°C with two stages compressor at 50% / 100% capacity

EX6 with 126 kW covers condition A, however is not sufficient to cover condition B. It is recommended to select larger valve i. e. EX7 with 337 kW at condition A and 293 kW at condition B.

Condition A:

$$\text{Full load ratio} = 110 / 337 = 33\%$$

$$\text{Partial load ratio} = (110/2) / 337 = 16\%$$

Condition B:

$$\text{Full load ratio} = 137 / 293 = 47\%$$

$$\text{Partial load ratio} = (137/2) / 293 = 23\%$$

The capacity ratios of system to valve are in all conditions higher than 10%. It is recommended to use EX7 rather than EX6.

Application Hot Gas Bypass - Nominal Capacities (kW)

Valve Type	Kv, m ³ /h	R22 / R407C	R134a	R404A / R507
EX4	0.21	4.9	3.4	4.6
EX5	0.68	16	11	15
EX6	1.57	37	26	35
EX7	5.58	131	92	126
EX8	16.95	399	278	382

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R22, R134a, R404A, R507	+4°C	+38°C	1K

For other operating conditions use Excel based Selection Tool (download from www.emersonclimate.eu) or use the following quick selection tables.

Biflow versions are not released for hot gas bypass applications. EX4 .. EX8 must be installed with motor downward in hot gas line applications. This insures the valve life expectancy. Install a check valve on main hot gas line just after branch to Control Valve.

Condensing Temperature °C	Extended Capacity kW			Valve type
	R22 / R407C	R134a	R404A / R507	
60 bubble point for all refig. (64 dew point for R407C)	7	4.9	5.8	EX4
	23	16	19	EX5
	54	38	45	EX6
	191	135	161	EX7
	581	411	488	EX8
50 bubble point for all refig. (54 dew point for R407C)	6.1	4.3	5.5	EX4
	20	14	18	EX5
	46	32	41	EX6
	163	115	147	EX7
	495	348	447	EX8
40 bubble point for all refig. (45 dew point for R407C)	4.9	3.7	4.9	EX4
	16	12	16	EX5
	38	27	36	EX6
	136	95	130	EX7
	414	289	394	EX8
30 bubble point for all refig. (35 dew point for R407C)	4.3	2.8	4	EX4
	14	9	13	EX5
	32	22	31	EX6
	112	78	111	EX7
	340	236	336	EX8

Application Suction Pressure Regulation (Evaporating or Crankcase Pressure) - Nominal Capacities (kW)

Valve Type	Kv, m ³ /h	R407C	R22	R134a	R404A
EX6	1.57	3.9	4.1	3.1	3.5
EX7	5.58	14	15	11	13
EX8	16.95	42	45	34	38

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.15 bar
R22, R134a, R404A	+4°C	+38°C	1K	0.15 bar

For other operating conditions use Excel based Selection Tool (download from www.emersonclimate.eu) or use the following quick selection tables.

For biflow versions attention should be paid to the temperature range TS -40°C bis +80°C ! EX6 .. EX8 must be installed with motor downward in suction line applications. This insures the valve life expectancy.

Example:

EX6 provides 3.5 kW at 0.15 bar pressure drop with R404A or 3.5*1.41=4.9 kW at 0.3 bar pressure drop.

Multiply above nominal capacities by following factors to obtain capacities at different pressure drops:

Typical Order Package

- 1) Valve EX6, EX7 or EX8
Plug and cable assembly EXV-M60
- 2) Controller Kit EXD-U00 Part No. 808 038

Application Condensing Pressure Regulation and Liquid Duty - Nominal Capacities (kW)

Valve Type	Kv, m ³ /h	R407C	R22	R134a	R404A
EX5	0.68	18	20	18	13
EX6	1.57	43	46	42	30
EX7	5.58	153	162	151	106
EX8	16.95	463	491	458	323

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.35 bar
R22, R134a, R404A	+4°C	+38°C	1K	0.35 bar

For other operating conditions use Excel based Selection Tool (download from www.emersonclimate.eu) or use the following quick selection tables.

For biflow versions attention should be paid to the temperature range TS -40°C bis +80°C ! EX6 .. EX8 must be installed with motor downward in suction line applications. This insures the valve life expectancy.

Example:

EX6 provides 30kW at 0.35bar pressure drop with R404A or 30*0.76=22.8 kW at 0.2 bar pressure drop.

Multiply above nominal capacities by following factors to obtain capacities at different pressure drops:

ΔP, bar	0.15	0.20	0.35
Correction factor	0.65	0.76	1.00

Condensing Temperature °C	R134a	Extended Capacity Evaporating Temperature (°C)			Valve type

Application Hot Gas Flow such as Heat Reclaim Application - Nominal Capacities (kW)

Valve Type	Kv, m ³ /h	R22 / R407C	R134a	R404A / R507	R410A
EX6	1.57	11	9	10	13
EX7	5.58	39	33	36	47
EX8	16.95	119	101	108	144

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop	Isentropic Efficiency
R407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.35 bar	80%
R22, R134a, R404A, R507	+4°C	+38°C	1K	0.35 bar	80%

For other conditions see following tables.

Valves must be installed with motor downward in hot gas line applications. This insures the valve life expectancy. Bi-flow versions are not released for hot gas flow applications.

Condensing Temperature °C	Pressure Drop bar	R134a		Extended Capacity KW Evaporating Temperature (°C)											Valve type

Electrical Control Valves Series EX4, EX5, EX6, EX7, EX8

Technical Data

Compatibility *	HCFCs, HFCs, CO ₂ Mineral and POE lubricants
MOPD (maximum operating pressure differential)	EX4/EX5/EX6/EX7: 35 bar EX8: 30 bar
Max. allowable pressure, PS	45 bar
Medium temperature range: Uniflow version Biflow version	Liquid inlet temperature TS: -50 ... +100°C TS: -40 ... +80°C
Ambient temperature Storage temperature	-40 ... +55°C -40 ... +70°C
CE marking EX4/EX5 EX6/EX7/EX8	not required required, Cat I, Module A
Salt spray test	non-corrosion stainless steel body
Humidity	5 ... 95% R.H.

* Valves are not released for use with inflammable refrigerants.

Connections	ODF stainless steel fittings
Protection accordance to IEC 529, DIN 40050	IP 67 with Alco supplied cable connector assembly
Vibration for non-connected and fastened valve	4 g (0 .. 1000 Hz, 1 Oktave /min.)
Shock	20g at 11 ms, 80g at 1 ms
Net weight	0.5 kg (EX4), 0.52 kg (EX5), 0.6 kg (EX6), 1.1 kg (EX7), 1.5 kg (EX8)
Full travel time	EX4/EX5/EX6: 1.5 s EX7: 3.2 s, EX8: 5.2 s
Seat leakage	Positive shut-off better than solenoid valve
External leakage	≤ 3 g / Year
Package and delivery	Single pack, without electrical connector

High Pressure Expansion Valves Series CX4, CX5, CX6, CX7

Emerson Climate Technologies CX series are stepper motor driven valves for precise control of R744 (CO₂) refrigerant mass flow in air conditioning, refrigeration, heat pump applications. The Control Valves can be used as high pressure expansion valve, liquid injection duty, hot gas bypass.

Features and Benefits

- Maximum allowable pressure, PS: 120 bar
- Test pressure, PT: 132 bar
- Burst pressure: >360 bar
- Fully hermetic design (no thread joints between valve body and motor compartment)
- Applicable to transcritical CO₂ applications
- Very short full stroke time
- High resolution and excellent repeatability
- Positive shut-off of valve to eliminate the use of an additional solenoid valve
- Linear flow capacity
- Extremely wide capacity range (10 ... 100%)
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Direct coupling of motor and valve for high reliability (no gear mechanism)
- Ceramic slide and port for accurate flow and minimal wear
- Balanced force design
- Corrosion resistant stainless steel body and connections
- 40 micron internal strainer

Selection Chart

Type	Part No.	Kv, m ³ /h	Capacity Range	Inlet Connection ODF	Outlet Connection ODF	Electrical Connection
CX4-CO ₂	801 990	0.21	10 ... 100%	3/8"	5/8"	M12 plug
CX5-CO ₂	801 991	0.68		5/8" (16 mm)	7/8" (22 mm)	
CX6-CO ₂	801 992	1.57		7/8"	1-1/8"	
CX7-CO ₂	801 996	5.58		1-1/8"	1-1/8"	

Cable and Connector Assemblies

Type	Part No.	Temperature Range	Length	Connector type to valve	Connector type to driver or controller	Illustration

Condenser controllers					
For up to 4 fans			EC2-712	EC2-711	149
With fan speed control, 2 digital outputs			EC2-742	EC2-741	149
For up to 6 stages, one with continuous control output 0 ... 10V, heat recovery control			EC3-752		154
Electronic fan speed controllers					
Pressure actuated, current range 0.1 ... 4A		FSY			160
Current range 0.3 ... 8A, 1- or 3-phase versions		FSP/FSE			162
Electronic smart starter					
For single phase compressor motors with up to 32A		CSS			157
Pressure transmitter					
Output signal 4 ... 20mA		PT5			158
Universal controllers					
With 2 digital inputs, 3 temperature inputs, 4 relay outputs			EC2-112	EC2-111	143

Electronic Superheat Controllers and Stepper Motor Drivers

Emerson Climate Technologies designed superheat controllers and valve drivers for stepper motor driven control valves for all commercial refrigeration and airconditioning applications.

EC3-X33 is a universal superheat controller without network communication for air conditioning, refrigeration and industrial applications such as chillers, industrial process cooling, rooftops, heat pumps, package unit, close control, cold room, food process and air driers. The ECD-002 Display/keypad Unit is necessary for setup but not for operation of the controllers. ECD-002 can be connected or disconnected to EC3-X33 at any time.

In the event of a cooling request and compressor start-up, EC3-X33 needs to be informed. This can be achieved by a digital input. EC3-X33 will start to control the refrigerant mass flow stand-alone by precise positioning of the Control Valve under different operating conditions such as compressor start-up, start of a further compressor, high head pressure, low head pressure, high load, low load and partial load operation. EC3-X33 is capable for diagnostics and alarm. The alarm can be received via relay output as well as optical LED/alarm code on ECD-002.

The **EC3-X32** has a similar function as EC3-X33 but with a TCP/IP Ethernet communication interface enabling the controller to be directly connected to a network or a PC via the standard Ethernet port. The EC3-X32 controller has

embedded WebPages to enable the user to visualise the parameter list with a standard WebBrowser like Internet Explorer®. When connected to a suitable connection, the controller is able to automatically send alarms by email to a PC or mobile phone.

For use with **Copeland Scroll™ Digital** technology two other models are available. **EC3-D73** is a stand-alone version for use with the ECD-002 Display / Keypad unit whilst the **EC3-D72** has a TCP/IP Ethernet interface.

A 0-10V demand signal is required from a third party controller to control a tandem system with one fixed and one digital compressor. A patented algorithm synchronises the operation of the PWM digital compressor valve and the EX series electrical control valve.

EXD-U Universal Drivers are stepper motor drivers and enable the operation of ALCO® stepper motor driven valves EX4 ... EX8 as Electronic expansion valve, Capacity control by means of hot gas bypass or evaporating pressure regulator, Crankcase pressure regulator, Condenser pressure regulator, Liquid level and Liquid injection.

The universal driver module can be connected to any controller which can provide a 4-20mA or 0-10V analogue signal. The output is the opening/closing of EX4 ... EX8 and consequently the control of the refrigerant liquid or vapour mass flow in accordance with the analogue input.

Display Case and Coldroom Controllers

The compact **EC2** series is available with either TCP/IP or LON communication protocols and covers also applications where the display cases are connected to a multiple compressor application. In this case, the dedicated compressor relay on the controller is no longer required and is available as a spare relay to perhaps switch the display case lighting. The controllers can therefore be split into two groups; controller is required to switch the compressor directly; integral application and those connected to a multiple compressor (rack) system.

The **EC2-21x**, **EC2-31x** and **EC2-35x** have the dedicated compressor relay.

The **EC2-29x**, **EC2-39x** and **EC2-37x** are for use with the rack system.

The **EC2-200** series of controllers are specifically designed for display cases for use **with TXV**. The controller performs the function of thermostat, defrost and fan management and is capable of operating a standalone condensing unit or being incorporated into a distributed system controlled by a rack.

The **EC2-300** series incorporate the functionality of the EC2-200 model but additionally have a superheat algorithm to control the EX2 control valve:

EC2-31x / EC2-39x (Temp / Temp): the superheat is controlled using two temperature sensors.

EC2-35x / EC2-37x (Pressure / Temp): the superheat is controlled using a pressure transmitter (PT5 series) in conjunction with a temperature sensor.

Whilst the products were developed for display cases, they may also be applied to control a simple coldroom.

The **EC3 series** utilize in principle the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans. The optional **ECD-001 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

The **EC3-300** series are specifically for use with stepper valve series (EX4, EX5, EX6, EX7, EX8). In case of power loss the Electrical Control Valve needs to be closed to avoid flooding of the compressor, therefore each valve requires a battery backup. For this reason, the battery together with its automatic charging circuit has been incorporated into the controller housing significantly saving installation time as well as space in the electrical enclosure.

Condensing Units, Rack and Condenser Controllers

Condensing Unit Controllers

The **EC2-500** series of controllers are suitable for controlling the compressors and fans of a condensing unit. Digital inputs are available for individual compressor feedback loops from the safety chain, which typically consists of low and high pressure switches together with motor protection and oil management controls. A common feedback is also available for the fans.

Following models are available:

EC2-512: to control up to 2 compressors (on/off control) and 2 fans (on/off control)

EC2-552: to control up to 2 single stage compressors or tandem compressor condensing units with a **Copeland Scroll™ Digital** compressor. It features a 0...10V output to connect to an Alco Controls **FSP fan speed power module** for variable fan speed control. Alternatively this output may be used to control fan motor speed with an inverter or to connect to ECM type fan motors directly.

Rack and Condenser Controllers

The **EC3 series** utilize in principle the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans. Many controllers include 0...10V outputs that may be used in conjunction with frequency inverters and/or the **FSP** series of **fan speed power modules**.

Commonly referred to as “hot application controllers”, the **EC3-600, -700, -800 & -900** series controllers are designed for the control of compressors and condensers. Racks with one or two suction groups and up to 8 single stage compressors including a **Copeland Scroll™ Digital** or 6 multistage compressors can be managed. **EC3-65x** and **EC3-93x** series have been designed to control a **Copeland Scroll™ Digital** and incorporate a triac to switch the PWM solenoid.

The control of condenser arrays with up to 6 fan stages as well as a combined control of Rack and Condenser is also possible. Refer to the table on page 137 for a complete product listing.

The optional **ECD-000 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

Condenser Controllers

The **EC2-700** series provide an economical solution for condenser control.

Two models are available:

EC2-71x: to control up to 4 fans, on/off. A feedback loop is available for each fan.

EC2-74x: provides a 0...10V output to feed **FSP** series **fan speed power modules**. Several FSP modules may be connected in parallel to speed control all fans simultaneously.

The **EC3 series** provides additional inputs and outputs to satisfy the requirements of even the most demanding systems:

EC3-75x: for condensers with up to 6 stages, one with continuous control output 0 ... 10V, heat recovery control.

The optional **ECD-001 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

The Universal Series of Controllers

are useful additions to the series. They are typically used to enable the monitoring of temperatures from integral display cases that do not have communication facilities as well as potentially providing additional input and output functionality to control systems. Example of such applications could be for switching display case lighting or for the monitoring of individual pressure switches on multiple compressor Racks.

PT5 series pressure transmitters are used to measure the suction and discharge pressures to modulate the compressor and fan capacities.

Network Communication and System Management

The Alco EC Series of drivers and controllers utilise the very latest in communication technology which is setting new standards in the refrigeration industry. Energy saving algorithms are incorporated into many of the controllers including: Adaptive superheat and thermostat modulation, defrost on demand & suction and discharge setpoint shift. All **EC2** or **EC3** controllers are available in two communication protocols **TCP/IP Ethernet** and **LON**.

TCP/IP Ethernet:

The controllers are Ethernet based enabling them to be connected directly to any computer via the Ethernet port (RJ45 connector). The controllers act as web server enabling the engineer to pick-up standard configuration pages directly from the controllers without the need of any additional hardware or software. Each controller can be connected to the PC using a crossover cable however, the most convenient way to connect a controller to the PC is to use a router that will automatically assign a TCP/IP address. Either way, the engineer can access the monitoring and parameter configuration pages by entering the TCP/IP number into the address line of an Internet browser such as Mozilla or Microsoft Internet Explorer. User name and password protection is provided to protect the controller from unauthorized access.

The **TCP/IP based Controllers** offer a practical solution particularly for smaller installations that require communication for monitoring purposes without the need for customized visualization. For many installations, an additional monitoring server is not required.

Other Functions:

- Monitoring of system temperatures and pressures as well as relay status information
- Read/write of EC2 & EC3 control parameters
- Real time graphical visualization
- Log function of up to one months data directly on the controller
- Log function of data to a PC *
- Storage and retrieval of system parameter
- Local alarms via email *
- Remote alarms via email **

* Controller must be connected to the PC

** Router must be connected to an external telephone line and / or the Internet via an Internet Service Provider (ISP).

A new TCP/IP driver has been added to the EMS Monitoring Server enabling the TCP/IP controllers to be incorporated into a system whereby the temperature and status data from multiple controllers can be visualised simultaneously on one screen.

LON Protocol:

An identical range of free-topology LON FTT10 based controllers is available and compliments the TCP/IP controller series. LON is an open system protocol created by Echelon and therefore benefits from not being tied to a restrictive third party protocol.

LON based controllers can be connected to each other to form simple networks for applications requiring master / slave or synchronized defrosting. However, they can also be connected to a Monitoring Server to fulfill the most sophisticated system requirements.

The Monitoring Server acts as an interface from the LON network containing EC2 and EC3 to the outside world. Remote access can be made using standard telephone line; analog or digital ISDN. Alternatively, data can be transmitted via the Internet or a dedicated company Intranet using TCP/IP. Either way, visualization may be made using an industry standard Internet web browser.

By transmitting the system status information as temperatures or pressures, used to control the refrigeration circuit in each subsystem, together with other vital system data, the system administrator can potentially identify system failures before they become an expensive stock loss situation. Should a system failure occur, the controllers automatically transfer to an emergency-operating mode whilst sending a system error message to the monitoring server.

The benefit of a **centralized data acquisition system** is that it can dramatically reduce the costs associated with food, which cannot be sold as a result of failing to meet the criteria set by the food hygiene regulations.

The **monitoring server** is typically connected to a analog or digital phone line and can communicate a system alarm to a remote location via fax, email or SMS. In a similar way to the TCP/IP controllers, the engineer can visualize the system without the need of any additional hardware or software. The system can be visualized by entering the TCP/IP address of the EMS Monitoring server into the address line of the Internet web browser. In fact, the advancement of telecommunication systems are such that a maintenance engineer equipped with a laptop computer and mobile telephone can interact with the system from any location.

Superheat Controllers Series EC3-X32 / EC3-X33

for stable superheat control with stepper motor driven electrical control valves Series EX4 - EX8

Digital Superheat Controllers Series EC3-D72 / EC3-D73

for stable superheat control with EX4...EX6 electrical control valves and automatic synchronisation of the PWM capacity control valve incorporated into the Copeland Scroll™ Digital compressor technology

Features

- Limitation of evaporating pressure (MOP)
- Feed-through of 4 ... 20mA signal of evaporating pressure transmitter to operate third party controllers with a common pressure transmitter
- Intelligent alarm management, superheat alarm
- Monitoring of sensors and sensor wiring, detection of sensor and wiring failures
- Integral rechargeable battery to close Electrical Control Valve in case of power loss
- Electrical connection via plug-in type screw terminals
- Aluminum housing for DIN rail mounting

EC3-X33 with ECD-002

- Freeze protection
- Low and high superheat alarm
- Low pressure switch function/Alarm

Additional features EC3-X32 and EC3-D72 with TCP/IP

- WebServer functionality allows monitoring and configuration of controllers through a standard WebBrowser (e.g. Internet Explorer®)
- Internal data logging and alarm messaging by email
- Multiple language support (www.emersonclimate.eu)

ECD-002 Display Unit

- Front panel mounted interface for parameter and status read-out and controller setup via keypad
- Indicator LEDs for valve opening/closing, external ON and alarm

EX5-N60	Electrical Cable and Plug assembly	PT5-07M	Pressure Transmitter
EC3-X33	Superheat Controller Stand-alone	PT4-M60	Cable assembly PT5 6.0m
K03-X33	Terminal Kit for EC3-X33	ECD-002	Display (optional)
ECT-323	Transformer 25VA	ECC-N30	Connection cable EC3 to ECD (opt.)

PT5 PT4-Mxx

ECT-323

Universal Driver Modules Series EXD-U00

for the operation of ALCO® stepper motor valves EX4 / EX5 / EX6 / EX7 / EX8 as

- Solenoid Valve
- Electrical Expansion Valve
- Hot Gas Bypass or Evaporating Pressure Regulator as capacity control
- Crankcase Pressure Regulator
- Heat Reclaim Regulator
- Liquid Level Control

Features

- Plug and play, no parameter setting
- Valve opening proportional to 4-20mA or 0-10V analogue input signal
- Digital input can be used to force valve closing
- Dip-switches for selection of Electrical Control Valves, analogue input and start mode
- Aluminium housing for DIN Rail mounting
- Easy wiring
- Fully tested and ready for operation
- CE-marking for electromagnetic compatibility

Options

- Uninterruptible Power Supply ECP-024 to automatically close valve after power down

EXD-U00

Selection Chart

Description	Type	Part No. single unit	Part No. Kit*
Universal Driver Module	EXD-U00	804 557	808 038
Electrical Terminal Kit	K09-U00	804 559	

* Controller Kit contains terminal kit

Accessoires

Description	Type	Part No.	Note
Uninterruptible Power Supply	ECP-024	804 558	for up to 2 driver modules
Electrical Terminal Kit	K09-P00	804 560	for ECP-024
Transformer 25VA	ECT-323	804 424	
230V/24V AC 60VA	ECT-623	804 421	

Capacity Data

see Electrical Control Valve EX4 ... EX8 data.

For function as:

- Expansion Valve - Superheat Control see page 117
- Capacity Control by means of Hot Gas Bypass see page 125
- Evaporating Pressure Regulator or Crankcase Pressure Regulator see page 126
- Condensing Pressure Regulation and Liquid Duty see page 128
- Application hot gas flow such as heat reclaim application see page 130

ECP-024

ECT-323

See datasheet A3.5.048 for detailed application drawings and technical data. For other than the specified operating conditions an Excel based Selection Tool can be downloaded from www.emersonclimate.eu

Display Case and Universal Controllers Series EC2

with Web Server functionality and TCP/IP Protocol or with LON Protocol (FTT-10)

Features of EC2-3 models:

- Superheat control for Pulse Width Modulated Valves (e.g. EX2-Series) see Selection Table
- Self-adapting controller, no user setup necessary
- Limitation of evaporating temperature (MOP)

Features of all models:

- Air temperature control
- Defrost timer for natural, electric or hot-gas defrost with fan control
- Integrated timer and alarm functions
- All parameters and functions are programmable:
 - via standard web browser (EC2-xx2 models)
 - via LON communication (EC2-xx1 models)
 - with integral keypad
- Password protection to eliminate unauthorised use
- Multiple language support (www.emersonclimate.eu)
- Standard 29 x 71 mm cutout dimensions
- 2 1/2 digit display in °C or °F
- CE approved

Communication LON (see page 140)

- Echelon® LON FTT-10 interface based on the Lonworks® standard for monitoring and configuration through a supervisory system such as the EMS Monitoring Server

Communication TCP/IP Ethernet

- Web Server function provides monitoring and configuration through a standard web browser. Ethernet interface, as used in most office PCs.
- Graphical visualisation via built-in webpages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog

EC2 Controller

Options

- Standard screw terminal kit K02-000 available for all models. OEM crimp versions available upon request.
- Ethernet cable ECX-N60 for EC2-xx2
- NTC temperature sensors
- Transformers for 230VAC mains

Example for Webpage monitoring

Block Diagrams

EC2-35x / -37x Case Controller (EX2, Press/Temp)

Inputs

- 1 = Suction pressure
- 2 = Coil out temperature
- 3 = Air in temperature
- 4 = Air out temperature
- 5 = Defrost temperature

Outputs

- 6 = EX2 Expansion valve
- 7 = Compressor (EC2-35x only)
- 8 = Fan
- 9 = Defrost heater
- 10 = spare relay (EC2-37x only)

EC2-31x / -39x Case Controller (EX2, Temp/Temp)

Inputs

- 1 = Coil in temperature
- 2 = Coil out temperature
- 3 = Air in temperature
- 4 = Air out temperature
- 5 = Defrost temperature

Outputs

- 6 = EX2 Expansion valve
- 7 = Compressor (EC2-31x only)
- 8 = Fan
- 9 = Defrost heater
- 10 = spare relay (EC2-39x only)

EC2-21x / -29x Case Controller (TXV)

Inputs

- 1 = Digital Input
- 2 = Digital Input
- 3 = Air in temperature
- 4 = Air out temperature
- 5 = Defrost temperature

Outputs

- 6 = Solenoid valve
- 7 = Compressor (EC2-21x only)
- 8 = Fan
- 9 = Defrost heater
- 10 = spare relay (EC2-29x only)

EC2-11x Universal I/O Controller

Inputs

- 1 = Digital Input
- 2 = Digital Input
- 3 = Temperature input
- 4 = Temperature input
- 5 = Temperature input

Outputs

- 6 = Digital output
- 7 = Digital output
- 8 = Digital output
- 9 = Digital output

Coldroom Controller Series EC3

Temperature and Superheat Control of EX4 .. EX8 (Stepper Motor)

Features

- Superheat control with self-adapting algorithm for Stepper Motor driven ECVs (EX4 ... EX8)
- Thermostat, fan & defrost control
- Limitation of evaporating temperature (MOP)
- Analog inputs: 3 NTC temperature sensors
- with integral backup battery to close Control Valve in case of power loss
- Analog input for suction pressure measurement using Alco PT5 Series pressure transmitters
- Digital inputs for compressor safety and coldroom door contact
- Relay outputs for compressor, defrost and alarm plus programmable relay
- All parameters and functions are programmable:
 - via TCP/IP Ethernet controller (EC3-xx2)
 - via LON communication (EC3-xx1 models)
 - with keypad of optional display unit ECD-001
- Electrical connections via plug-in type screw terminals
- Lightweight aluminum enclosure for DIN rail mounting
- Multiple language support
(see www.emersonclimate.eu)
- CE approved

Ethernet Cable 5m	ECC-N50	807 862

EC3-332

ECD-001

Features of ECD-001 Display Unit

- Connection to EC3 Series via a RJ45 Western Digital plug. No further power cables required
- 2 1/2 digit display
- Indicator LEDs for compressor, fan, heater and alarm
- 4 keys allow parameter modification if necessary
- Easy mounting in panels with 71 x 29 mm cutout
- IP65 if mounted in front panel

Options

- Front mounted ECD-001 Display Unit for temperature and output status indication
- NTC temperature sensors
- EMS Series Monitoring Server for remote visualisation and programming

Controller EC3-33x

Supply voltage	24 VAC ±10%, 50/60 Hz Class II only
Power consumption	25VA max. for EX4 .. EX7 28VA max. for EX8
Plug-in connector size	Removable screw version wire size 0.14 ... 1.5 mm²
Communication interface	LON FTT10 (EC3-331) TCP/IP Ethernet with Webserver (EC3-332)
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP 20
Weight	~ 800 g
Mounting	DIN rail mounted

Display Unit ECD-001

Supply voltage	via ECC-N10 from EC3 controller
LED indicators	Compressor, fan, defrost, alarm outputs LON service pin
Display LED	Numeric segmental display, red, 2 1/2 digits with automatic dec. point betw. ±19.9 switchable between °C and °F
Operating Keys	4 operating keys: Programming, select service/up, defrost/down
Connecting lead	1m (ECC-N10) with RJ45 connectors
Temperature storage operating	-20 ... +65°C 0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP 65 (front panel with gasket)
Weight	~ 52 g
Mounting	Panel door (71 x 29mm cutout)

Block Diagram

EC3-33x Coldroom Controller for stepper motor driven ECV

Inputs

- 1 = Coil out temperature
- 2 = Air temperature
- 3 = Defrost temperature
- 4 = Suction pressure
- 5 = Compressor safety
- 6 = Door contact

Outputs

- 7 = Compressor
- 8 = Defrost heater
- 9 = Alarm
- 10 = Fan
- 11 = Stepper motor ECV
- 12 = Output signal (4...20 mA)

Condenser- and Condensing Unit Controllers Series EC2

with Webserver Function and TCP/IP or with LON FTT-10 Interface

Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Electrical connection via plug-in type screw terminals
- with Webserver Function and TCP/IP or with LON FTT-10 Interface (see page 140)
- Operation and commissioning via local or remote PC
- CE approved

EC2 Controller

Condenser Controllers

- Compact controller to control condensing pressure by modulation of fan capacity

Condensing Unit Controllers

- To control a combination of compressors and condenser fans based on suction and condensing pressure respectively
- Control of Copeland Scroll™ Digital Compressors

Communication LON

- Echelon® LON FTT10 interface based on the LonWorks® standard for monitoring and configuration through a supervisory system such as the EMS Monitoring Server

Communication TCP/IP Ethernet

- Web Server Function provides monitoring and configuration through a standard web browser. Ethernet interface, as used in most office PCs
- Graphical visualisation via built-in webpages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog
- Multiple language support (see www.emersonclimate.eu)

EC2-512 Condensing Unit Controller for up to 2 compressors and 2 fans

Inputs

- 1 = Suction pressure
- 2 = Condenser pressure
- 3 = Safety switch comp 1
- 4 = Safety switch comp 2
- 5 = Safety switches fans

Outputs

- 6 = Compressor 1
- 7 = Compressor 2
- 8 = Fan 1
- 9 = Fan 2

EC2-552 Condensing Unit Controller for 2 single stage compressors or 1 Digital Scroll™ and 1 single stage compressor

Inputs

- 1 = Suction pressure
- 2 = Condenser pressure
- 3 = Safety switch comp 1
- 4 = Safety switch comp 2
- 5 = Temperature input

Outputs

- 6 = Digital Scroll™ Compressor
- 7 = Single Stage Compressor
- 8 = Speed controlled fan
- 10 = Fan Speed Power Module
- 11 = PWM Digital Scroll™ Solenoid valve

Rack and Condenser Controllers Series EC3-652, -672, -752, -812, -932

with Webserver Function and TCP/IP Ethernet Protocol

Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Aluminum enclosure for DIN-rail mounting
- Electrical connection via plug-in type screw terminals
- Operation and commissioning via local or remote PC
- Control of Copeland Scroll™ Digital Compressors (EC3-652, EC3-932)
- CE approved
- Communication via:
TCP/IP Ethernet with Web Server function (see page 140)

EC3-6xx

Features of ECD-000

- Connection to EC3 Series via RJ45 Western digital plug. No further power cables required.
- 2 1/2 digit display
- Indicator LEDs for compressor and alarm status
- 4 keys allow parameter modification if necessary
- Easy mounting in panels with 71 x 29 mm cutout
- IP65 if mounted in front panel

Display	Numeric segmental display, LED red, 2 1/2 digits, numeric value device status and alarm indication
LEDs	1 x unit indicator bar/°C 1 x alarm LED
Connecting lead	1,0 m (ECC-N10)
Operating Keys	4 operating keys: programming, service/up, select/down
Temperature storage	-20 ... +65°C
operating	0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP65 (front panel with gasket)
Weight	~ 52 g
Mounting	Panel mount (71x29mm cutout)

Block Diagrams

EC3-652 Rack Controller for 8 single-stage compressors or 7 single-stage Compressors and 1 Digital Scroll™

Inputs

- 1 = Discharge temperatures of up to 8 compressors
- 2 = Suction pressure
- 3 = Discharge pressure
- 4 = Serial alarm inputs for up to 8 compressors
- 5 = Low pressure alarm
- 6 = High pressure alarm
- 7 = Oil level alarm
- 8 = Refrigerant level alarm

Outputs

- 9 = for up to 8 compressors
- 10 = to control a Digital Scroll™

EC3-672 Rack Controller for Capacity Controlled Compressors

Inputs

- 1 = Suction pressure
- 2 = Discharge pressure
- 3 = Serial alarm inputs for up to 6 compressors
- 4 = Low pressure alarm
- 5 = High pressure alarm
- 6 = Oil level alarm
- 7 = Refrigerant level alarm

Outputs

- 8 = 12 outputs for up to 6x2 / 4x3 / 3x4 capacity controlled compressors

EC3-752 Condenser Controller

Inputs

- 1 = Ambient temperature
- 2 = Humidity sensor
- 3 = Condensing pressure
- 4 = Serial alarm inputs for up to 6 fans
- 5 = High pressure alarm
- 6 = Heat recovery demand

Outputs

- 7 = For up to 6 stages, from which 1 can be speed controlled
- 8 = Speed controlled fan (see 7)
- 9 = Heat recovery solenoid

Block Diagrams

EC3-812 Dual Circuit Rack Controller (4 + 3 compressors)

Inputs

- 1 = Discharge temperature inputs of 3 compressors
- 2 = Suction pressure group A
- 3 = Suction pressure group B
- 4 = Serial alarm input for each compressor respectively
- 5 = Refrigerant level alarm
- 6 = Low pressure alarm group A
- 7 = Low pressure alarm group B
- 8 = High pressure alarm
- 9 = Oil level alarm

Outputs

- 10 = For up to 4 compressors suction group A
- 11 = For up to 3 compressors suction group B

EC3-392 Rack and Condenser Controller (up to 4 compressors + condenser)

Inputs

- 1 = Discharge temperature
- 2 = Ambient temperature
- 3 = Suction pressure
- 4 = Condensing pressure
- 5 = Serial alarm inputs for 4 compressors
- 6 = Low pressure alarm
- 7 = High pressure alarm
- 8 = Oil level alarm
- 9 = Refrigerant level alarm
- 10 = Serial alarms for 3 fans
- 11 = Heat recovery demand

Outputs

- 12 = Up to 4 compressors
- 13 = Up to 3 fans, from with 1 fan can be speed controlled
- 14 = Speed controlled fan (see 13)
- 15 = Heat recovery solenoid
- 16 = to control a Digital Scroll™

Compressor Soft Starter CSS-25U / CSS-32U

The Compressor Soft Starter CSS-25U / CSS-32U is used for switching, protection and starting current limitation of single phase compressors in refrigeration and air conditioning applications

Features

- For motors with maximum operating current up to 25A/32A
- Limitation of starting current to less than 45 A
- Self adjusting for use in 50 Hz or 60 Hz supply
- Self adjusting to motor current - no manual adjustment or calibration necessary
- Alarm relay output
- Start capacitor for improved motor acceleration is switched off after start
- Low voltage shutdown
- Locked rotor recognition and shutdown
- Delay function to limit number of motor starts per hour
- Thyristor protected contactor for long life
- No extra motor contactor needed
- Self diagnostics
- Mounting clip for easy installation allows DIN rail mounting in two directions
- Easy connection by cage type screw terminals

CSS-25V

CE Standards:

- LVD 2006/95/EC Low Voltage Directive
- EN 60947-1 Low voltage switchgear and controlgear
- EN 60947-4-2 Contactors and motor-starters - AC semiconductor motor controllers and starters
- EN 60335-1: VDE released version CSS-32V planned for 4Q 2011
- EMC 2004/108/EC
- ROHS 2002/95/EC
- UL pending; planned for 4Q 2011

- A1, AC, A2 = Alarm relay contact

Pressure Transmitter Series PT5

Pressure Transmitters convert a pressure into a linear electrical output signal. PT5 has been optimized for Refrigeration applications.

Features

- Sensitive pressure cells with strong primary output signals for the precise operation of superheat, compressor or fan controls systems
- Fully hermetic
- PT5-xxM pressure connector 7/16-20 UNF with Schrader valve opener
- PT5-xxT with 6mm x 50mm long tube for applications requiring a fully hermetic system solution
- Vibration, shock and pulsation resistant
- Protection class IP 65
- Easy install M12 electrical connection with pre-assembled cable assemblies available in various lengths
- Output signal 4 to 20 mA
- Calibrated for specific temperature and pressure ranges to fulfill application demands in air conditioning and refrigeration systems
- Standard pressure ranges compatible with former Emerson pressure transmitters - Sealed gauge pressure

Options

- Other pressure ranges and calibrations
- Delivery in multipacks

Standards:

- per EMC Directive
- UL Listing

PT5-50M/T	0 ... +40°C -20 ... +60°C -30 ... +80°C	≤ ± 1 % FS ≤ ± 2 % FS typically ≤ ± 2 % FS

*) Total error includes non-linearity, hysteresis, repeatability as well as offset and span drift due to the temperature changes.

Note: % FS is related to Percentage of Full sensor Scale.

Electrical connection

Pressure transmitters PT5 with current output (2-wire connection) offer following advantages:

1. More suitable for signal transmission over long distances
2. Higher immunity to electromagnetic interference

Note: Changing the length of the electrical connection lead beyond 1.5 m can have a negative impact on electromagnetic compatibility. Additional protection may be required.

Electronic Fan Speed Controller Series FSY

Features

- Pressure actuated fan speed control
- Adjustable pressure for Cut-off
- High Voltage Triac (800 Volts)
- Integrated protection circuit against voltage peaks
- Compact design
- Protection IP65
- Easy mounting and adjustment
- Easy retrofit in existing plants
- No additional gasket required (completely molded into plug)
- Multi-position plug with EMC filter incl. 1,5m (opt. 3 and 6m) cable for flexible installation
-  per EC 89/336/EC (together with FSF cable)
- UL file E183816

Housing material	PC and PA

Function Diagram

The control behaviour can be easily described by looking at the function of output voltage versus input pressure: In the **maximum range** the FSY provides a constant output voltage of approximately 1% below the supply voltage. The fan is running at maximum speed. Along the **proportional range** the output voltage varies between maximum and minimum voltage of approximately 50% of the supply voltage. This causes the fan to slow down from maximum to minimum speed.

Further decrease of pressure in the minimum range leads to cut-off of the fan motor. Reincrease of input pressure will start the motor with a hysteresis of approximately 0.7 bar to avoid cycling. The pressure from which motor cuts off is adjustable (see pressure range).

Electronic Fan Speed Power Module FSP and Control Module FSE

Features FSP

- Can be used in combination with ALCO® FSE Control Module, EC2, EC3 and other electronic controllers which provide a 0...10 V output signal for condensing pressure control
- Versions for 3- and 1- phase motors approved for phase cut operation
- Paralleling of fan motors up to maximum current
- Reduced fan noise level during low ambient temperature conditions
- Energy saving due to improved cooling efficiency
- Short start impulse during partial load to overcome friction and windmilling
- Easy installation with cables for power supply and motor connection factory wired
- IP67 protection for outdoor mounting

		FSP-L15	804 693	1.5		
		FSP-L30	804 694	3.0		

Selection Dependent on Product Combination

Selection

1. Select a **Power Module FSP** by the total maximum operating current and phases of condenser fan motors
2. Select a **Control Module FSE** based on the pressure requirements of the refrigerant used:
 FSE-01S for R134a,
 FSE-02S for R22 / R404 A / R407C / R507
 FSE-03S for R410A
 - or a controller of the EC Series
 - or another electronic controller which provides a 0...10 V output signal
3. Select a **Cable Assembly**
 - a) for connection of **FSE to FSP**:
FSE-Nxx: -25 ... +80°C
 - 3 lengths: (1.5 - 3.0 - 6.0 m)
 - b) or for use with an electronic controller with 0...10V signal output:
 (e.g. EC2-74x, EC2-54x, EC3-75x, EC3-92x):
FSP-Lxx: -50 ... +80°C
 - 2 lengths: (1.5 - 3.0 m)

Function Diagram

The behaviour of FSP together with FSE can be described by the following control diagram:

The top curve describes the fan speed at decreasing, the lower curve at rising pressure. At high condensing pressure fan is running with maximum speed (top right). In the proportional range of the curve fan speed is decreased with pressure. If the pressure falls below the specified limit the fan is cut-off.

A large hysteresis is built-in to prevent fan cycling at this point. Pressure must increase by approximately 1 bar before fan restarts. A short start pulse helps fan to overcome friction or windmilling before it supplies the proportional value.

Along the proportional range the fan speed varies between 20% and 100% for 3-phase motors and between 30% and 100% for single phase motors.

Technical Data FSP

Temperature Range Operation	-20°C to +65°C
Protection class (IEC 529 / EN 60529)	IP 67

Thermo® Expansion Valves

Basic Terms and Technical Information

Operating principles

Alco® Thermo®-Expansion valves control the superheat of refrigerant vapour at the outlet of the evaporator. They act as a throttle device between the high pressure and the low pressure sides of refrigeration systems and ensure that the rate of refrigerant flow into the evaporator exactly matches the rate of evaporation of liquid refrigerant in the evaporator. Thus the evaporator is fully utilized and no liquid refrigerant may reach the compressor.

Description of bulb charges

The application ranges of Thermo®-Expansion valves are heavily influenced by the charge selected.

Liquid charges

The behaviour of Thermo®-Expansion valves with liquid charges is exclusively determined by temperature changes at the bulb and not subject to any cross-ambient interference. They feature a fast response time and thus react quickly in the control circuit. Liquid charges cannot incorporate MOP functions. Maximum bulb temperatures shall not exceed 75°C.

Gas charges

The behaviour of Thermo®-Expansion valves with gas charges will be determined by the lowest temperature at any part of the expansion valve (power assembly, capillary tube or bulb). If any parts other than the bulb are subject to the lowest temperature, malfunction of the expansion valve may occur (i.e. erratic low pressure or excessive superheat). Alco® Thermo®-Expansion valves with gas charges always feature MOP functions and include ballasted bulbs. Ballast in the bulb leads to slow opening and fast closure of the valve. Maximum bulb temperature is 120°C.

Adsorption charges

These charges feature control characteristics much like MOP charges but avoid the difficulties of cross-ambient interference. Response time is slow but perfectly suitable for common refrigeration systems. Maximum bulb temperature is 130°C.

MOP (Maximum Operating Pressure)

MOP functionality is somewhat similar to the application of a crankcase pressure regulator. Evaporator pressures are limited to a maximum value to protect compressor from overload conditions. MOP selection should be within maximum allowed low pressure rating of the compressor and should be at approximately 3K above evaporating temperatures.

Practical hint: Superheat adjustments influence the MOP:

Increase of superheat: Decrease of MOP
Decrease of superheat: Increase of MOP

Static superheat

Alco® Thermo®-Expansion valves are factory preset for optimum superheat settings. This setting should be modified only if absolutely necessary. The readjustment should be at the lowest expected evaporating temperature.

Subcooling

Subcooling generally increases the capacity of refrigeration system and may be accounted for when dimensioning an expansion valve by applying the correction factor K_c . The capacity corrections for evaporating temperature, condensing temperature and subcooling are all incorporated in K_c . These are in particular the liquid density upstream from the expansion valve, the different enthalpies of liquid and vapour phase refrigerants as well as certain part of flash gas after expansion. The percentage of flash gas differs with various refrigerants and depends on system conditions.

Heavy subcooling results in very small flash gas amounts and therefore increases expansion valve capacities. These conditions are not covered by K_c . Likewise, small flash gas amounts lead to reduced evaporator capacities and may result in substantial discrepancies between the capacities of the Thermo®-expansion valve and the evaporator. These effects must be considered during component selection when designing refrigeration circuits. In cases when subcooling exceeds 15 K, sizing of components (K_c , $K\Delta p$) should be modified accordingly. The field practice indicates the following correction factors can be used to compensate the effect of the subcooling (liquid hammering) in addition to the use of correction factors K_c and $K\Delta p$.

Subcooling	20K	30K	40K	50K	60K
Correction factor	0.8	0.7	0.6	0.5	0.4

Emerson Climate Technologies will be happy to assist you. Please contact application engineering department.

Dimensioning

To correctly select a Thermo®-Expansion valve on a system, the following design conditions must be available:

- Cooling capacity Q_o
- Effective pressure differential across Thermo®-Expansion valve Δp
- Evaporating temperature/pressure
- Lowest possible condensing temperature/pressure
- Liquid temperature
- Type of refrigerant

As opposed to single substances (e.g. R22, R134a etc.) where the phase change takes place at a constant temperature/pressure, the evaporation and condensation of **zeotropic blend R407C** is in a gliding form (e.g. at a constant pressure the temperature varies within a certain range) through evaporators and condensers. The evaporating/condensing pressure must be determined at saturated temperatures (bubble/dew points) for dimensioning of Thermo®-Expansion valves.

To facilitate valve dimensioning for other than the standard conditions Emerson Climate Technologies offers an Excel based Alco® Selection Tool. This can be ordered from all Emerson sales offices. See www.emersonclimate.eu for contact addresses, email or phone numbers.

Example

Cooling capacity of a system: 18 kW
 Refrigerant: R407C
 Condensing temperature (saturated liquid): +35°C
 (Condensing pressure will be 15.5 bar)
 See appendix page 251 for
 Evaporating temperature (saturated vapour): 0°C
 (Evaporating pressure will be 4.61 bar)
 Subcooling: 1 K
 Pressure drops through liquid line: 2.2 bar
 Pressure drops through evaporator: 0.3 bar
 Required type of Thermo®-Expansion valve: T-series

To calculate the nominal capacity the following formula has to be used:

$$\text{Cooling capacity} \times K_t \times K_{\Delta p} = \text{Nominal capacity}$$

1. Selected **Kt-factor** according to refrigerant, liquid and evaporating temperature from table on page 182.

$K_t = 0.98$ (for this example)

2. Determine pressure differential across the Thermo®-Expansion valve using condensing pressure, subtract evaporating pressure and all other possible pressure losses (pressure drops in evaporator, drier, solenoid valve, liquid distribution...).

For this example:

$$\Delta p = 15.5 - (4.61 + 2.2 + 0.3) = 8.39 \text{ bar}$$

Select **K Δp** factor from table on page 182:

K Δp = 1.15 (for this example)

3. Multiply cooling capacity with **Kt** and **K Δp** to find nominal capacity for Thermo®-Expansion valve.

$$Q_n = 18 \times 0.98 \times 1.15 = 20.29 \text{ kW}$$

Select Thermo®-Expansion Valve from table on page 178: TCLE 550 NW (for this example).

Please note that all evaporating/condensing temperatures in this catalogue are based on saturated vapour/liquid temperatures.

Selection Guide for Expansion Valves

Series	Selection Criteria				Catalogue Page
	Capacity Range kW (R 404A)	Evaporating Temp. Range °C	Main Application	Features	
TI	0.5 to 14.2	+20 to -45	Refrig./Air-Cond. Heat Pumps	Interchangeable Orifices	168

Thermo®-Expansion Valves Series TI

new valve design, exchangeable Orifices

Features

- Laser welded diaphragm with large diameter for high reliability and maximum life time
- Constant superheat across wide application ranges
- Easy and precise superheat setting by modified threads
- TILE with stainless steel fittings allow brazing without wet rags
- With capacities between 0.4 kW and 14.2 kW (R404A) ideally suited for service work
- Internal or external equaliser
- Brazing and flare connections available
- Capillary tube length 1.5 m
- PS: 45 bar. TS: -45 ... +75°C
- No CE marking according art. 3.3 PED 97/23 EC

Inlet: Flare 5/8"-18UNF for 6mm, 8mm., 10mm, 1/4", 5/16" and 3/8" tubes

Outlet: Flare 3/4"-16UNF for 12mm and 1/2" tubes.
Solder metric: ODF for 12mm tubes. Solder inch: ODF for 1/2" tubes

Ext. Equalizer: Flare 7/16"-20UNF for 6mm and 1/4" tubes.
Solder metric: ODF for 6mm tubes. Solder inch: ODF for 1/4" tubes

Quick Selection Tables

Published capacity data at 1 K subcooling at the inlet of the expansion valve and 1.5 bar pressure drop in the refrigeration system. For proper valve selection especially in case of high pressure drops, we recommend the use of correction factors (see page 180).

To facilitate valve dimensioning for other than the standard conditions Emerson Climate Technologies offers an Excel based Alco® Selection Tool (www.emersonclimate.eu).

Thermo®-Expansion Valve Series TX3

for OEM use, hermetic Design

Features

- Hermetic design with solder connections
- Internal or external equalizer
- External superheat adjustment
- Large diaphragm eliminates disturbances to the valve and provides smoother valve control
- Very compact size
- Version with internal check valve eliminates external check valve for heat pump applications
- Capillary tube length 1.5m
- PS: 45bar. TS: -45 ... +120°C
- Packaging units with 24 pieces, no single packs

MOP

MOP (bar)	Upper limit of Evaporating Temperature Range					
	R134a	R22	R407C	R404A	R410A	R507
2.3				-18°C		-18.7°C
3.3	+11°C					
6.4		+13°C	+14.5°C			
12.9					+17°C	

Pressures are given in gauge pressure.

Thermo®-Expansion Valve Series TX6

Hermetic Design

Features

- Balanced port design for constant superheat operation over a wide application range under variation of condensing pressure
- Hermetic monobloc design with solder connections for minimal leakage
- Large diaphragm eliminates disturbances to the valve and provides smoother and consistent valve control
- Tailored charges for different applications
- External equalizer
- External superheat adjustment
- PS: TX6-H/N/M/Sxx : 31bar. TX6-Zxx: 42bar
- TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Thermo®-Expansion Valve Series T

Exchangeable Power Assemblies and Orifices

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (TJRE, TERE, TIRE & THRE)
- Biflow capability for applications in heat pumps
- Capillary tube length 1.5 m (TCLE, TJRE) and 3m (TERE, TIRE & THRE)
- PS: 31 bar. TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Thermo®-Expansion Valve Series ZZ

for Low Evaporating Temperatures between -45 and -120°C

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Capillary tube length 3 m
- PS: 31 bar. TS: -120 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Type Code

ZZCE

Available upon special request:

- Power assembly with solder connection for external pressure equalization
- Non-standard MOPs
- Non-standard charges
- Non-standard connection sizes (Selection see page 192)

Liquid Injection Valve Series L

Exchangeable Power Assemblies and Orifices

Features

- Applications for Series L valves include superheat control (de-superheating of suction gas i.e. in hotgas bypass systems and interstage cooling in multiple stage compressors)
- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to seat orifice design (LJRE, LERE & LIRE)
- Capillary tube length 3 m
- PS: 31 bar. TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Type Code

Correction Tables for Series L

Valve selection for desuperheating of suction gas:

The required desuperheating capacity Q_{des} has to be multiplied with the correction factors on page 180.

$$Q_{des} \times K_t \times K_{\Delta p} = Q_n$$

Q_{des} : Required desuperheating capacity
 K_t : Correction factor for evaporating and liquid temperature
 $K_{\Delta p}$: Correction factor for pressure drop at valve
 Q_n : Nominal valve capacity

Valve selection for desuperheating of suction gas in conjunction with hotgas-bypass regulation:

The required bypass capacity Q_{Byp} has to be multiplied with correction factor K_{ti} per table below.

$$Q_{Byp} \times K_{ti} = Q_n$$

Q_{Byp} : Required bypass capacity
 K_{ti} : Correction factor for evaporating temperature
 Q_n : Nominal valve capacity

Correction factors based on 20K superheat suction gas at the inlet of compressor, discharge temperature 28K above isentropic compression and 1K subcooling.

Liquid Injection Valves Series 935

Exchangeable Power Assemblies and Orifices

Applications

- Series 935 valves are applied as temperature controls.
- Applications include:
 - Desuperheating of discharge gas on compressors. In this case bulbs are mounted on the high pressure outlet of the compressor
 - Control of compressor oil temperatures
- Series 935 valves shall not be used to control superheat

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Combinations of different charges with various orifice springs cover a very large application range
- PS: 31 bar. TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC
- Non-standard connection sizes see page 192

* = Temperature Code		Temperature Range °C					* = Spring Code			* = Charge Code
3		-1 / +17					B			UL
6		+14 / +38					C			KL
7		+36 / +50					A			YL
105		+44 / +70					C			YL
106		+66 / +94					C			JL
100		+94 / +121					C			LL

Nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R407C	+4°C dew point	+38°C bubble p. +43°C dew point	1K
R22, R134a, R404A, R507	+4°C	+38°C	1K

Valve selection for other operating conditions see page 189.

Spare Parts

Description	Type	Part No.
Gasket Set for 935 Series Valves	X 13455 -1	027 579
Service Tool for 935 Series	X 99999	800 005
Steel screws for following flange types: C501, 9761, 6346, A576	Screw ST 32	803 573

Correction Tables for Series 935

Valve selection for operating conditions other than nominal conditions:

$$Q_n = Q_o \times K_t \times K_p$$

Q_n : Nominal valve capacity

Q_o : Required cooling or desuperheating capacity

K_t : Correction factor for evaporating and liquid temperature

K_p : Correction factor for pressure drop at valve

Solenoid Valves

Basic Terms and Technical Information

Operating principles

Directly actuated: The magnetic field of the solenoid coil forces a movement of the plunger and thus causes the opening of the valve seat.

Servo actuated: The magnetic field of the solenoid coil is only utilized for the opening of the pilot valve seat. The necessary energy to actuate the piston or diaphragm of the main valve seat is provided by the refrigerant flow and results in a certain pressure drop.

Minimum pressure drop

Directly actuated solenoid valves do not require a minimum pressure drop for proper operation.

Servo operated solenoid valves require a minimum pressure drop of approximately 0.05 bar to remain fully open. In case of insufficient refrigerant flow this value will not be reached and the solenoid valve may close unintentionally. These closures may lead to malfunctions and oscillations in the refrigeration circuit. Improper sizing of solenoid valves (i.e. use of excessively large solenoid valves) is the main cause of this effect. This is particularly important in capacity controlled refrigeration circuits.

Therefore the decisive factor for proper solenoid valve sizing is the respective capacity of the valve and not its connection size.

Formula for calculating the actual pressure drop of a solenoid valve:

$$\Delta_{p1} = \Delta_{p2} \times (Q_{n1}/Q_{n2})^2$$

Δ_{p1} : Actual pressure drop
 Δ_{p2} : Nominal pressure drop at Q_{n1}
 Q_{n1} : Calculated nominal capacity
 Q_{n2} : Nominal capacity of selected valve

Maximum Operating Pressure Differential (MOPD)

MOPD is the maximum pressure differential between inlet and outlet of the solenoid valve which permits proper opening of the valve. When used with Alco® AC solenoid coils all Alco® solenoid valves employ 25 bar MOPD.

Operation in conjunction with DC solenoid coils lead to reduced MOPD values depending on valve type and size.

The **DS2 Chopper Plugs** allow the use of 24VAC coils with 24VDC by converting the DC in an AC voltage. Please contact Emerson Climate Technologies application engineering for additional details.

Correction Tables for the Selection of Solenoid Valves

For use with 110 RB, 200 RB, 240 RA and 540 RA Series

Valve selection for operating conditions other than nominal:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

Q_n : Nominal valve capacity
 K_t : Correction factor for evaporating and liquid temperature
 $K_{\Delta p}$: Correction factor for pressure drop at valve
 Q_o : Required cooling capacity

The pressure drop can be calculated with the following formula:

$$\Delta P_o = \Delta P_n \times \frac{Q_o^2}{Q_n^2}$$

$$\Delta P_n = 0.15 \text{ bar}$$

ΔP_n : Pressure drop under nominal conditions

3-Way Solenoid Valves Series M36

Features

- For heat reclaim application
- Pilot connection to suction line required, no minimum pressure drop
- Compact size
- Snap-on clip for attaching solenoid coils
- No disassembly necessary for brazing
- Max. allowable pressure PS: 35 bar

Options:

- Actuation coil and cable assemblies available for various voltages, see page 198

M36-118

M36-078 with ASC Coil
and DS2 Chopper Plug

Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated pressures / dew point), 0.15 bar pressure drop between valve inlet and outlet.

For other operating conditions multiply required capacity Q_o with correction factors K_t and $K_{\Delta p}$.

$$Q_o \times K_t \times K_{\Delta p} = Q_n$$

Q_o : Required cooling capacity
 K_t : Correction factor for evaporating and liquid temperature
 $K_{\Delta p}$: Correction factor for pressure drop at valve
 Q_n : Nominal valve capacity

Mechanical Pressure Regulators

Basic Terms and Technical Information

Capacity regulators

Regulator series ACP and CPHE are hot gas bypass regulators and serve the purpose of compensating excess compressor capacity. Thus they prevent the generation of evaporator pressures below predetermined levels.

In case of hot gas injection into the suction line, a liquid injection valve in conjunction with a solenoid valve is required to desuperheat the excessively hot suction gas. The capacity should not be reduced below 60 % of maximum in this application to avoid oil return problems.

With hot gas injection at the evaporator inlet, no liquid injection valve is necessary. The injection must be such that the incremental gas volume is taken into account. No problems with oil return should be expected even when regulating 100% of capacity.

Evaporator pressure regulators

Series PRE regulators serve the purpose of maintaining evaporator pressure above certain predetermined levels. The most important application is the use of several evaporators with different evaporating temperatures in conjunction with a common suction line.

The freezing of water in water chillers and air conditioning systems can be safely prevented if evaporating temperatures are kept above 0°C, even when loads are greatly reduced.

Crankcase pressure regulators

Series PRC regulators serve the purpose of preventing excessively high suction pressures to protect compressor motors from overloading.

Excessively high suction pressures can occur at start-up of a refrigeration circuit in case of high loads and after defrost. Crankcase regulators are adjusted to the maximum allowed suction pressure rating of the compressors as given by the compressor manufacturers.

* Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Hot Gas Bypass Regulators Series CPHE

Features

- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (CPHE3 to CPHE6)
- Modular design for economical logistics and easy assembly and servicing
- External equalization

Specific connection sizes and flanges available on request. Selection see page 192

Pressure Controls

Basic Terms and Technical Information

Characteristics

Pressure controls serve various functions, which may be divided into control and protection functions. Examples for control functions are compressor cycling, pump-down or defrost control. Protection functions include, pressure limiting and cut out against excessive pressures, against loss of charge or for freeze protection. These functions are performed by operating a set of electrical contacts when exceeding a preset lower or upper pressure limit. Depending on whether they are type tested (TÜV approved) or not they may be referred to by the following terms:

without TÜV approval:	Pressure Control
with TÜV approval:	Pressure Limiter, Pressure Cut Out or Safety Pressure Cut Out

Pressure controls with TÜV approval are tested according to EN 12263 as required by DIN 8901 and EN 378.

1. Pressure controls (without TÜV approval)

Pressure controls without type approval may either be of the automatic or manual reset type. Manual reset versions are available for decreasing (manual reset min.) or increasing pressure (manual reset max.)

2. Pressure limiters PSL/PSH

Pressure limiters are of the automatic reset type. Limiters for high pressure applications have a double bellows design to act as fail-safe controls.

3. Pressure cut outs PZH/PZL

Pressure cut outs are of the manual reset type where reset is possible from the outside of the control without the need for a tool (external reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

4. Safety pressure cut outs PZHH/PZLL

Pressure cut outs are of the manual reset type where the reset requires the use of a tool. Typically, the removal of a cover is required in order to press the reset button (internal reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

Adjustment of switching points

A pressure gauge should always be used for comparison when adjusting the switching points on pressure controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point p_{max} in bar/psig and the value of the pressure differential Δp as difference between upper switching point p_{max} and the lower switching point p_{min} . The upper switching point p_{max} has to be adjusted on the scale, whereas the lower switching point p_{min} is given by adjustment of the desired switching differential Δp .

The formula is:

$$\text{Upper switching point} - \text{Differential} = \text{Lower switching point}$$

$$P_{max} - \Delta p = P_{min}$$

Function of contacts SPDT

On pressure rise above setting 1-2 opens and 1-4 closes. On pressure drop below setting 1-2 closes and 1-4 opens.

SPDT with manual reset max.

On pressure rise above setting 1-2 opens and 1-4 closes and latches. The device can be manually reset when the pressure has dropped below setting.

SPDT with manual reset min.

On pressure drop below setting 1-2 closes, 1-4 opens and latches. The device can be manually reset when the pressure has risen above setting.

Unit of pressure

All pressures are given in gauge pressure

$$P_{absolute} = P_{gauge} + 1 \text{ bar}$$

$$1 \text{ bar} = 100 \text{ kPa}$$

$$1 \text{ bar} = 14.5 \text{ psi}$$

Pulsation damping

All high pressure controls with A-connection ($\frac{7}{16}$ -20UNF. " SAE male) are equipped with a snubber to protect the pressure element from pulsations.

Standards and Regulations

BGV D4 (VBG20)	Accident prevention regulations for refrigeration plant.
DIN 8901	Heat pumps with fluorocarbon refrigerants. Protection of soil, underground and surface water.
EN 60947-1/ EN 60947-5-1	Specifications for low-voltage switchgear.
EN 378	Refrigerating systems and heat pumps - Safety and environmental requirements.
EN 12263:	Refrigerating systems and heat pumps - Safety switching devices for limiting the pressure requirements and tests.

Pressure Controls Series PS1 / PS2

Features

- Adjustable pressure range
- Automatic and manual reset versions
- Flare and solder connections
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Dual pressostat with two separate SPDT for high and low pressure side
- Including sealable blocking plate and mounting screws

Options

- Convertible reset to reduce stock
- Further pressure connections
- Factory set to customer specification

Pressure Controls Series PS3 / Standard types

Compact Pressure Switch with fixed switch-point settings

Features

- **Maximum allowable pressure up to 43 bar / test pressure up to 48 bar**
- Standard factory settings from stock in small volumes
- High and low pressure switches
- High temperature version with snubber for direct compressor mounting (range 6)
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Precise setting and repeatability
- IP 65 protection if used with PS3-Nxx and PS3-Lxx cables with plug (acc. EN 175301-803), no additional gasket required (molded into plug)
- Cables with plug to be ordered separately

Standards

-  per Low Voltage Directive
-  per PED Directive 97/23 EG, TÜV appr. versions only
- Manufactured and tested to  standards on our own responsibility
-  Underwriter Laboratories

PS3

Pressure Controls Series PS3 / Special types

For OEM use with settings according to customer's specification,
minimum order quantity 100 pcs.

Features

- Maximum allowable pressure up to 43 bar / Test pressure up to 48 bar
- For direct mounting on a pressure connection (free standing) or with a capillary tube
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Direct mounting saves cost for flexible hose and additional fittings
- Precise setting and repeatability
- High temperature version with snubber, for direct compressor mounting (range 6)
- Micro switch for narrow pressure differentials
- Gold plated contacts for low voltage / current applications
- Worldwide approvals
- Easy mounting

Options

- Low pressure switch with automatic or manual reset
- High pressure switch with automatic or manual reset, standard or high temperature version
- Pressure limiter PSH - standard or high temperature version
- Pressure cut-out PZH - external reset, standard or high temperature version
- Safety pressure cut-out PZHH - internal reset, standard or high temperature version

Electrical connections (optional)

- Cables with plug in lengths of 1.5m, 3.0m and 6.0m available. No additional gasket required.
- Appliance socket DIN 43650

Type of contacts (optional)

- Standard (SPDT)
- Micro switch (SPDT)
- Gold plated contacts upon request

Thermostats

Basic Terms and Technical Information

Characteristics

Alco® thermostats are electric circuit control devices which open or close an electric contact depending on temperature changes at the bulb.

Description of bulb charges

The application range of thermostats is mainly determined by the charge. Accordingly various bulb shapes and sizes are necessary.

- **Vapour charge, bulb type A, E, P**

The thermosystem is filled with a medium in vapour phase. A thermostat with vapour charge operates in accordance with temperature changes at the bulb as long as the bulb is the coldest part in the whole system (bellows, capillary tube, bulb). Alco® thermostats are equipped with a bellows heater (82 k Ohm, 230 V) to avoid such conditions. On applications with low current the bellows heater has to be removed. Max. bulb temperature is 150°C (70°C for bulb type E). Response time is very fast.

- **Adsorption charge, bulb type F**

This charge only reacts on temperature changes at the bulb. Max. bulb temperature is 100°C. Response time is slow but perfectly suitable for common refrigeration systems.

Adjustment of switching points

A thermometer should always be used for comparison when adjusting the switching points on temperature controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point $t_{\max}$ in °C and °F and the value of the temperature differential Δt in K as difference between the upper switching point $t_{\max}$ and the lower switching point $t_{\min}$. The upper switching point $t_{\max}$ has to be adjusted on the scale, whereas the lower switching point $t_{\min}$ is given by adjustment of the desired switching differential Δt . The formula is:

$$\text{Upper switching point} - \text{Differential} = \text{Lower switching point}$$

$$t_{\max} - \Delta t = t_{\min}$$

Important!

The differential Δt mentioned on the differential scale and in the technical data refers to the upper part of the setting range and the upper switching point.

In the lower part of the setting range an increase of the differential Δt can be expected. The lowest possible lower switching point $t_{\min}$ is mentioned in the selection tables and is helpful to select switching points with large differentials Δt in the lower temperature range.

Bulb Sizes

A	E	P	F
			
Vapour 2m, capillary with bulb	Vapour coil, 0m	Vapour 2m, capillary with function C and D 6m	Adsorption 2m, capillary with bulb

Function of contacts

		
SPDT - On temperature rise above setting 1-2 opens and 1-4 closes. - On temperature drop below setting 1-2 closes and 1-4 opens.	SPDT with manual reset min. - On temperature drop below setting 1-2 closes. 1-4 opens and latches. - The device can be manually reset when the temperature has risen at least 2K above setting.	SPDT with manual reset max. - On temperature rise above setting 1-2 opens and 1-4 closes and latches. - The device can be manually reset when the temperature has dropped 2K below setting.
		
PDT with off switch AUTOmatic - STOP		SPDT with bellows heater includes a 82 k Ohm. 230 V AC/DC resistor

Standards and regulations

Important for the installation of thermostats:

- EN 60730-2-9 Specification for temperature controls and temperature cut-outs.
- EN 60947-1/ EN 60947-5-1 Specifications for low-voltage switchgear.
- EN 378: Refrigerating systems and heat pumps. Safety and environmental requirements.

Thermostats Series TS1

Features

- Adjustable temperatures and differentials
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Captive terminal and cover screws
- Range and differential individually lockable

Technical Data

System Protectors and Moisture Indicators

Filter Driers

Basic Terminology and Technical Information

Function

The purpose of filter driers is to keep the refrigeration circuit clean of water, acid and solid contaminants. In case of contamination, corrosion and ice building can occur, as well as malfunction of the compressor.

Property of desiccants

Molecular sieves

This kind of desiccant has a very good drying effect independent of the oil content of the refrigerant. Molecular sieve is a fast acting desiccant and will remove moisture even when the water content of the refrigerant is low and when the temperature of the liquid refrigerant is high.

Activated alumina

Activated alumina incorporate an excellent acid capacity. By selecting a specific mixture of both desiccants an optimum effect can be achieved to cover the requirements of all kinds of applications. Liquid filter driers are especially designed for a high water capacity whereas suction line filter driers feature a high acid and filtration capacity.

Flow capacity

Flow capacity refers to ARI-Standard 710-86 and DIN 8949 and is based on a pressure drop of 0.07 bar, +30°C liquid temperature and -15°C evaporating temperature for common refrigerants.

The flow capacities are given at two levels of pressure drop: 0.07 and 0.14 bar.

For Filter drier selection under other operating conditions use the correction factors on page 230.

Water capacity

The water capacity for R22 refers to ARI 710-86 and DIN8948 is based on a liquid temperature of 24/52°C and an equilibrium point dryness (EPD) of 60 PPM water in refrigerant. The EPD for other refrigerants according to DIN 8949 is as follows:

Refrigerant	EPD (PPM)
R134a	50
R407C	50
R404A	50
R507	50
R410A	50

Bi-flow Filter Driers Series BFK

hermetic design, for liquid refrigerants

Features

- Solid block style
- Integrated check valves insure Bi-flow capability, eliminate the need for external check valves and reduce the external piping
- ODF Copper fittings for easy soldering
- Pattern flow for non-turbulent performance
- High water, acid adsorption capacity
- Temperature range TS: -40°C to +65°C
- Max. allowable pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

•  US LISTED Underwriter Laboratories

The rated flow capacities are in accordance with ARI standard 710-86 and DIN 8949 at +30°C liquid temperature and -15°C evaporating temperature.

Selection method for other conditions:

1. Determine the correction factor (page 230) based on type of refrigerant, liquid and evaporating temperature.
2. Multiply the correction factor by cooling capacity or heating capacity whatever is more.
3. Select the filter drier according to determined capacity corresponding to flow capacity at 0.07 bar pressure drop.

Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R744	-40°C	-10°C
R22, R134a, R404A, R407C, R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 230.

Filter Driers Series FDB

Hermetic design, bead style, for liquid refrigerants

Features

- Compacted bead style (spring loaded)
- Optimum blend of molecular sieve and activated alumina combined with high filtration capacity
- Final filtration 20 micron
- Filtration first for more effective use of surface area of desiccant
- High water and acid capacity
- Cushioned flow for non-turbulent performance
- ODF Copper fittings for easy soldering
- Rugged steel shells
- Corrosion resistant epoxy paint
- Temperature range TS: -40°C to +65°C
- Max. allowable pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive
-  Underwriter Laboratories

Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R22, R134a, R404A, R407C, R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 230

Filter Drier Shells Series ADKS-Plus

for Liquid- and Suction Applications with Replaceable Cores

Features

- Rustproof Aluminum flange cover with notch hole for ease of mounting
- ODF Copper fittings for easy soldering
- Rigid core holder from steel (no plastic)
- Service friendly core holder and flange cover
- Optimum flow capacity at low pressure drop
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:
34,5 bar (-10°C to +65°C)
25,9 bar (-45°C to -10°C)
- CE marking according PED 97/23 EC
-  Underwriter Laboratories

Nominal Operating Conditions

Nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R744	-40°C	-10°C
R22, R134a, R404A, R407C, R410A, R507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 230

Filter Drier Shells Series FDH

for Liquid- and Suction Applications with Replaceable Cores

Features

- Steel flange cover with notch hole for ease of mounting
- Plated steel ODF connections
- Rigid core holder from steel (no plastic)
- Service friendly core holder and flange cover
- Optimum flow capacity at low pressure drop
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:
46 bar (-10°C to +65°C)
25,9 bar (-45°C to -10°C)
- CE marking according PED 97/23 EC

Filter-Drier Shells With Quick-Cap Series FDS-24

for Liquid- and Suction Applications with Replaceable Cores

Features

- Quick-cap flange (one bolt) design makes replacing of cores in a matter of seconds
- Ideal for retrofit, reducing installation / material cost
- Ideal for refrigerant recovery / reclaim units with regular change of filter-drier
- Compatible with CFC, HCFC and HFC refrigerants
- Free volume as a receiver in FDS-24... (580 cm³)
- ODF Copper fittings for easy soldering
- Corrosion resistant powder painting of shell body
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:
4,5 bar (-10°C to +65°C)
25,9 bar (-45°C to -10°C)
- No CE marking according art.3.3 PED 97/23 EC
- HP marking according to German Pressorized Vessel Directive

* Do not exceed max. allowable pressure PS: ADK/FDB/BFK: 43.0 bar; ADKS/FDS: 34.5 bar (-10°C ... +65°C); FDH: 46 bar (-10°C ... +65°C)

Suction Line Filters and Filter Driers Series ASF and ASD

Hermetic design

Features

- Minimum pressure drop due to internal construction and compacted bead style
- Service friendly with 2 Schrader valves for pressure drop measurement
- ODF Copper fittings for easy soldering
- Filtration down to 10 micron
- Temperature range TS: -45°C to +50°C
- Max. allowable pressure PS: 27,5 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

Nominal flow capacity at +4°C evaporating temperature (saturated condition/dew point) and a pressure drop of 0.21 bar between inlet and outlet of ASF/ASD. Correction factor for other evaporating temperatures than +4°C:

$$Q_n = Q_o \times K_s$$

Q_n: Nominal capacity
K_s: Correction factor for a pressure drop corresponding 1 K saturation temperature
Q_o: Required cooling capacity

Suction Line Filter and Filter Drier Shells Series BTAS for replaceable Filters and Filter Drier Cores

Features

- Corrosion resistant brass body ideal for suction line applications
- Extremely large filtration area for optimum flow capacity
- Low pressure drop
- Filtration down to 10 micron
- Temperature range TS: -45°C ... +50°C
- Max. allowable pressure PS: 24 bar

Moisture Liquid Indicators Series MIA

Features

- Fully hermetic
- Corrosion free stainless steel body
- Crystal Indicator element for long lifetime and reliability
- Indication of dryness according to ASERCOM recommendation
- Easy determination of moisture content
- Sensitive indicator with calibrated four colours
- Large clear viewing area
- Lightweight (only 60g MIA-M06/014)
- ODF extended tube configurations suitable for all commercial applications
- For R22, R407C, R134a, R404A, R507 and R410A together with Mineral- and POE oils
- Max. allowable pressure PS: 45 bar
- UL certified for Canada, see SA 4876 (except MIA-078)

Moisture Liquid Indicators Series AMI

Features

- First choice for R134a, R22, R404A, R407C, R507 and polyolester lubricants
- High accuracy of moisture indication according to ASERCOM recommendation
- Fused glass - no leakage
- Long lifetime of indicators by utilization of crystals
- Indicator with high resistance against acid and water
- Wide angle view for exact distinction of vapour and liquid
- Max. allowable pressure PS: 31 bar

Oil Management Components

Technical Information

Refrigeration compressors are lubricated by refrigeration oil that circulates from the compressor crankcase or housing. As refrigerant gas is discharged by the compressor, it will leave with a fine oil mist, that will be circulated throughout the entire system. Small amounts of oil circulating through the system will not affect the system performance. Too much refrigeration oil circulating in the system will have adverse effects on the components in the system. Circulating oil reduces the ability of the system to effectively remove the heat. Condensers, evaporators and other heat exchangers lose efficiency when coated internally with an oil film.

Refrigeration oil not returning to the compressor causes improper lubrication and eventual compressor failure. At low temperature application, refrigeration oil thickness becomes difficult to move, causing oil to be trapped in the system.

Oil separator function

Refrigerant gas leaving the compressor through the discharge line contains refrigeration oil in a vaporous mist. As this mixture enters the oil separator, the velocity is reduced to allow oil separation to begin.

The refrigerant gas and oil mixture enters the oil separator and passes through an inlet screen, causing the fine particles to combine. Larger oil particles are formed and drop to the bottom of the oil separator.

The refrigerant gas then passes through an outlet screen to remove residual oil particles. The oil gathers in the bottom of the oil separator until a float operated needle valve opens to allow the return of oil to the compressor. Oil returns quickly to the compressor, because of the higher pressure in the oil separator than in the compressor crankcase. When the oil level has lowered, the needle valve retracts to prevent refrigerant gas from returning back to the compressor. The refrigerant gas leaves through the outlet of the oil separator and goes to the condenser.

Oil level management system function

This system provides oil level balancing as well as oil level monitoring including alarm and compressor shut-down functions. The oil level is measured inside the compressor's crankcase. By operating an integrated solenoid valve, missing oil can be fed from the oil receiver or from the oil separator directly into the compressor sump. If oil level drops to a dangerous level the alarm contact changes into alarm state. The alarm contact may be used to shut down the compressor. The integrated electronics includes delay times in order to avoid short-cycling and nuisance alarms.

This system applies to compressor pack applications with multiple parallel compressor arrangements but also to stand-alone compressor applications for compressors without differential oil pressure monitoring.

Electronic Oil Level Management Systems OM3 / OM4 with alarm function and compressor shut down

Features

- **OM4 for high pressure refrigerants**
- IP65 rating due to molded housing and electrical connection with molded cable assemblies
- 3 Zone 100% level control by using precise Hall-sensor measurement
- Self contained unit with oil level sensor and integral solenoid to manage oil level supply
- SPDT output contact for compressor shut down or alarming, rating 230 VAC/3A
- Power supply 24 VAC, 50/60 Hz
- Alarm, status and 3 zone indication by LED's
- Easy installation by sightglass replacement and frontside installation without nuts
- Visual inspection of oil level still possible

OM3 / OM4 **TRAXOIL**

- Adapters suitable for various types of compressors
- Signal generated by gravity based float - not prone to errors by foaming or light like optical sensors
- Recommended by leading compressor manufacturers
- **CE** marking under Low Voltage and EMC Directive

Ordering Information (Example)

Standard system requires the following parts:

Type	Part No.	Description
OM3-CUA	805 030	Oil level system with flange adapter 3- / 4-hole
OM3-P30	805 151	Power Supply Cable 3.0m
OM3-N30	805 141	Relay Cable 3.0m
ECT-323	804 424	Transformer 230 VAC / 24 VAC, 25 VA
ODP-33A	800 366	Differential Oil Check Valve 3.5 bar

ODP-33A

Technical Data

Supply voltage / current	24 V AC, 50/60 Hz / 0.7 A
Maximum allowable pressure PS	OM3: 31 bar, OM4: 45 bar
Solenoid valve MOPD	OM3: 21 bar, OM4: 24 bar
Medium temperature	-20 to 80°C
Ambient temperature	-20 to 50°C
Time delay filling	10 s
Time delay alarm	20 s
Body material	Aluminum
Screw material	Stainless Steel

Medium compatibility	HCFC, HFC, mineral, synthetic, and ester lubricants
Orientation of base unit	horizontal
Level Control	40 to 60% of sightglass height
Protection class	IP 65 (IEC529/EN 60529)
Solenoid Coil	Alco® ASC 24 VAC, 50/60 Hz: 8VA
Weight	850 ... 930g (dep. on adapter)
Alarm contact	max. 3A, 230VAC, SPDT dry contact

Application

Traditional low pressure oil level management system

High pressure oil level management system

Oil Separator Series OS

Features

- Three different construction styles:
 - Hermetic
 - Top flange
 - Bottom flange with support bracket
- Stainless steel needle valve and floater
- Permanent magnet to catch iron particles out of the system
- Corrosion resistant epoxy powder painting
- ODF Copper fittings for easy soldering
- Temperature range TS: -10°C ... +150°C
- Max. allowable pressure PS: 31 bar
- CE marking according PED 97/23 EC

Capacity Data for other than Nominal Operating Conditions

Nominal capacities at +38°C condensing temperature (+38°C bubble point or +43°C dew point for R407C), +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Correction factor for other evaporating temperatures than nominal:

$$Q_n = Q_o \times K_t$$

Q_n : Nominal capacity

K_t : Correction factor for a pressure drop corresponding 1 K saturation temperature

Q_o : Required cooling capacity

Suction Accumulators, Ball Valves, Acid Test Kit

Features

- Hermetic design
- ODF Copper fittings for easy soldering
- Corrosion resistant epoxy powder painting
- Internal orifice with strainer for optimum oil return
- Temperature range TS: -45°C to +65°C
- Max. allowable pressure PS:
20.7 bar (-10°C to +65°C)
15.5 bar (-45°C to -10°C)
- CE marking for certain types according PED 97/23 EC
- HP marking for certain types according German pressurised vessels directive

Correction factor for other evaporating temperatures than nominal:

$$Q_n = Q_o \times K_t$$

Q_n : Nominal capacity
K_t : Correction factor for a pressure drop
corresponding 1 K saturation temperature
Q_o : Required cooling capacity

Evaporating Temperature (°C)	+4	0	-5	-10	-15	-20	-25	-30	-35	-40
Correction Factor K _s	1.00	1.12	1.35	1.75	2.00	2.50	3.00	3.75	5.00	6.60

Special seal caps to protect valve from unauthorized use

BVE / BVS Valve Size	Part No.	Thread (3)	Quantity per pack
1/4" ... 7/8" (6 ... 22mm)	806 770	M18x1	10 pcs
1-1/8" ... 1 3/8" (28 ... 35mm)	806 771	M27x1	10 pcs
1-5/8 (42 mm) ... 2-5/8"	806 772	M36x1	10 pcs

Ball Valves Series BVE / BVS

new version

Features

- BVS version with schrader valve
- Feature mounting capability
- Hermetic design
- Max. allowable pressure PS: 45 bar
- Compatible for high pressure Refrigerants as R410A and CO₂ (sub-critical)
- Light weight design
- Virgin PTFE seat gaskets
- Bi-directional flow characteristics
- Valve cap retained by strap attached to main body
- Pressure relief port design
- UL approval and CE marking acc. PED 97/23 EC
- Applied Standards EN 12284, EN 378, EN12420, PED 97/23/EC, RoHS 2002/95/EC
- To protect valve from un-authorized use a special cap is available as accessory (see page 252)

Technical Data

Max. allowable pressure PS	45 bar
Medium temperature TS	-40 ... 120°C (150°C short term)
Medium compatibility	HFC, HCFC, CO ₂ , Mineral, Synthetic and Polyol-Ester (POE) lubricants

Acid Test Kid Series AOK

Features

- Quick & easy test kit
- Universal acid test kit for use with all oils: Mineral, POE etc
- By changing the percentage of oil sample taken, the acid number of the oil can be accurately determined
- Phase separation of the chemicals in the kit provide a positive colour change regardless of the colour and condition of the oil

Type	Part No.
AOK-U01	804 166

Cable Assemblies with Plug

Emerson Climate Technologies offers cables with preconfigured plugs. This makes installation very easy and quick, only cable with crimped ends has to be connected.

The cable assemblies are available in various lengths:

Product Type			Cable length		
			1.5m	3.0m	6.0m
	ASC Solenoid Coils		ASC-N15 804 570	ASC-N30 804 571	ASC-N60 804 572
	ASC 24V for DC-applications		DS2-N15 804 620		
	EX4 ... EX8 new loose wires		EXV-M15 804 663	EXV-M30 804 664	EXV-M60 804 665
	FSY Fan Speed Controls		FSF-N15 804 640	FSF-N30 804 641	FSF-N60 804 642
	FSP Power Module connection to FSE Control Module		FSE-N15 804 680	FSE-N30 804 681	FSE-N60 804 682
	FSP 2-Pin Plug connection to EC2, EC3 or third Party Controllers		FSP-L15 804 693	FSP-L30 804 694	
	OM3 / OM4 Relays Cable			OM3-N30 805141	OM3-N60
	OM3 / OM4 Power Cable			OM3-P30 805151	OM3-P60 804 805

R or G same as BSP	Pipe thread female cylindrical	Male thread: R / NPT / BSP / G			Withworth- Pipe thread DIN 2999 / ISO 228
R same as BSP	Pipe thread male tapering	Female thread: R / NPT / BSP / G			Withworth- Pipe thread DIN 2999
G	Pipe thread male cylindar	Female thread: R / BSP / G			Withworth- Pipe thread ISO 228
NPT	Pipe thread female tapering	Male thread: R / NPT / BSP			Standard taper Pipe thread ASA B 2.1
	Pipe thread male tapering	Female thread: R / NPT / BSP / G			
ODF Outside Diameter Female	Solder female	Given dimension is outside tube diameter. Tube has to be pushed into ODF connection.			
ODF Outside Diameter Male	Solder male	Given dimension is outside tube diameter. Expanded tube can be pushed onto ODM connection or tube can be connected through a sleeve with the ODM connection.
